

AI Narrative™: The Insight Engine

🌐 consilio.com
✉ info@consilio.com

AI Narrative™ by TrueLaw automatically turns massive, messy document sets into interactive, story-driven reports that lawyers can explore, cite, and share, unlocking actionable insights into your litigation and investigation matters. AI Narrative™ can help with:

- **Deep-dive reporting** - AI Narrative™ ingests millions of documents, clusters key themes, and auto-generates a clickable narrative—complete with linked exhibits, timelines, and data visualizations.
- **Lawyer-assisted intelligence** - The system works in tandem with attorneys: you can guide the model to refine your results in real time, so the next search surfaces sharper, context-aware insights.
- **Live, drill-down workspace** - Every paragraph is a pivot point: expand to source text, pivot by custodian, traverse interactive timelines, or export sections to briefs with one click.

How can I use AI Narrative™?

Use Case	How AI Narrative Helps	Advantage to the Team
Early Case Assessment	Map custodians, key events, and timelines within hours of data load.	Attorneys can identify and find key insights and documents quickly
Deposition Prep	Generate witness-specific dossiers—statements, contradictions, top exhibits—all linked to source emails and chats.	Attorneys walk in with a “cheat sheet” that surfaces important material for witness or deposition prep.
Production Set Review	Audit outgoing productions for privilege leaks, PHI, or missing Bates ranges before they leave the door.	Reduce re-production risk and costly claw-backs.
Regulatory & Internal Investigations	Create chronologies and pattern analyses across email, voice, Slack, and more.	Deliver fast answers whenever stakeholders request them.
Trial Storyboarding	Build interactive timelines and thematic decks synced with exhibit lists.	Understand the facts quicker so more time is spent on legal analysis.
Develop Fact Patterns	Uncover fact patterns that you need to build your legal analysis.	Identify key fact patterns automatically and at scale.

Why Choose Consilio?

Trusted Expertise

Over a decade of leadership in document review and AI technology.

Proven AI Solutions

Custom-built AI algorithms developed in-house, hosted on our secure private cloud.

Unmatched Support

Dedicated AI Guides, Review Managers, and Analytics Experts work with you at every step.

How can I get started with AI Narrative™?

- TrueLaw's integration with Relativity allows you to import data directly from your Relativity workspace as well as export some of your TrueLaw Narrative results back into Relativity.
- To get started, select the set of documents you want to use and work with Practice Support to load the data.
- Once the data is ready, follow the steps on the TrueLaw platform to create a new application, select your data source, add context, and generate your report. Contact **Practice Support** for a demo and access on your next matter.

How safe, secure, and reliable is AI Narrative™?

Privacy & Security First

- TrueLaw is SOC 2 Type II and HIPAA compliant, reflecting our deep commitment to enterprise-grade security and regulatory standards. For full details on our security and compliance, visit our Trust Center to see how we safeguard client data at every level.

Client Data Segregation

- At TrueLaw, each client's data is securely stored in a dedicated Data Room, which is completely separate from other clients' Data Rooms. This ensures strong data isolation and confidentiality.
- Each Relativity workspace maps directly to a specific TrueLaw Data Room. Only users with the appropriate permissions in Relativity can export data into these Data Rooms, maintaining strict control over access and data flow.
- Within TrueLaw, only Data Room Editors can add new data. It's important that all Editors are aware of and follow best practices to ensure data is uploaded only into the correct client-specific Data Room. This

separation is a critical part of maintaining the security and integrity of client information.

AI Grounding Protocol

- At TrueLaw, our AI strictly generates outputs based only on the documents and data your legal team provides for your specific case. It does not access or incorporate information from external sources like the internet or unrelated cases when generating its output.
- That said, while we use multiple safeguards—including grounding outputs directly in your source materials—to minimize the risk of AI hallucinations (i.e., inaccurate or fabricated information), no AI system can guarantee 100% accuracy. We encourage your legal team to review and validate all outputs, just as they would with any tool used in legal workflows.

Model Training Policy

- Your data is never used to train TrueLaw's models for our own purposes or for use in other customers' matters. We maintain strict data isolation and do not use client data—whether documents, annotations, or outputs—for any cross-customer training or general model improvement without explicit permission.

Ready to Get Started?

Turn chaos into clarity with AI Narrative™—transform millions of messy documents into interactive, lawyer-driven reports you can explore, cite, and share.
