

Grounded legal intelligence, powered by Aurora. Delivered in Claude.

Aurora for Claude delivers grounded legal intelligence directly into Claude, enabling legal professionals to work with live matter data while maintaining existing permissions, governance, and security controls.

 Good afternoon

Build a report identifying stakeholders opposed to the proposed corporate restructuring initiative, summarize their concerns, and prepare a counter-analysis supported by evidence and opposing viewpoints from other stakeholders.

Used Aurora Legal AI integration, viewed a file, created a file >

Here's your report. It covers:

 Stakeholder Opposition Analysis [Download](#)

Opposition section — Key stakeholders opposed to the proposed corporate restructuring initiative, including their primary concerns, strategic objections, and operational risk arguments documented throughout the workspace.

Counter-analysis section — Structured rebuttals supported by *mid-level internal communications and executive* from other

Introducing Aurora for Claude Enterprise

Aurora for Claude connects AI Investigate to your Claude environment, bringing live matter intelligence directly into existing workflows. Investigate matters, surface source-backed insights, and transform findings into reports, strategic analyses, and stakeholder assessments while maintaining existing security, permissions, and governance controls. The result is faster access to critical facts, more informed decision-making, and greater value from both your legal data and AI investments.

THE AURORA DIFFERENCE

Data Stays Home, Intelligence Travels

Aurora for Claude operates within existing permissions, workspace controls, and governance policies, enabling legal teams to investigate live matters without moving sensitive data outside approved environments. Every interaction respects signed-in user access and matter-level permissions, helping organizations expand AI workflows while maintaining control over their legal data.

Grounded, Not Generic

AI Investigate connects responses directly to underlying matter data and supporting evidence, helping legal teams move beyond generic AI outputs. Citation-backed answers provide transparency into how conclusions were reached, enabling users to validate findings, build confidence in results, and make more informed legal decisions.

Connected Legal AI Workflows

Aurora brings governed legal intelligence into Claude rather than requiring users to migrate into a new destination platform. By extending Aurora capabilities into the AI tools teams already prefer, organizations gain greater flexibility while maintaining access to live matter intelligence, source-backed insights, and familiar workflows.

AURORA FOR CLAUDE CORE CAPABILITIES

"Find and list all of my active Coho Capital matters."

Matter Search

Quickly locate active and historical matters using natural language prompts instead of relying on matter numbers or manual navigation. Aurora for Claude helps legal teams move from broad portfolio visibility to targeted investigation workflows in seconds.

"What workspaces are in matter A12345?"

Workspace Lookup

Identify the relevant workspaces, review sets, and document collections connected to a matter without leaving your AI workflow. Faster workspace discovery helps teams access the right legal context earlier in the investigation process.

"When was the settlement first proposed in A12345?"

Investigate with Citations

Use AI Investigate directly within Claude to ask questions, analyze documents, and surface source-backed answers tied to underlying matter data. Citation-backed responses help legal teams validate findings and move forward with greater confidence.

POPULAR USE CASES

Early Case Intelligence

Identify key facts and patterns to accelerate case strategy development and reduce downstream review costs

Internal Investigations

Respond to regulators, triage issues early, and reduce dependence on costly outside counsel review cycles

Client Readiness

Quickly answer questions in client meetings, helping teams appear more prepared and informed

Law Firm Efficiency

Enhance client preparedness and streamline matter development without adding risk or complexity

Corporate Compliance

Replace costly reviews with AI-assisted insight while maintaining defensibility and precision

Deposition Preparation

Surface granular insights and prepare for high-stakes legal proceedings faster and more confidently
