

FACT SHEET

Microsoft Cloud Advisory Practice: Implementation & Enablement

Turn strategy into action. We design, configure, and deploy Microsoft Purview and Copilot governance solutions—so your organization moves forward with confidence, not risk.

The Challenge

Knowing your gaps is only half the battle. Most organizations stall between assessment and execution—leaving Purview modules partially configured, Copilot deployed without guardrails, and governance policies that exist on paper but not in production.

- Sensitivity labels defined but not enforced across SharePoint, Teams, and Exchange
- DLP policies that generate noise instead of actionable alerts
- Copilot enabled without information barriers, oversharing controls, or audit trails
- Insider risk and retention configurations left at default settings

Partial implementation creates a false sense of security—and real regulatory exposure.

What You Get

1. Information Protection Deployment

Sensitivity labels, auto-labeling policies, and encryption configured and enforced across M365 workloads—aligned to your classification taxonomy.

2. DLP & Insider Risk Configuration

Data loss prevention rules tuned to reduce false positives. Insider risk policies activated with appropriate thresholds and alert routing.

3. Copilot Governance Controls

Information barriers, Copilot boundary policies, and access scoping deployed so AI works within your compliance framework.

4. Retention & eDiscovery Workflows

Retention labels, legal hold policies, and eDiscovery case workflows configured in Purview—integrated with Consilio's downstream processing.

Why Choose Consilio?

Former Microsoft engineers

Our team built and deployed these solutions inside Microsoft—we know the product at the API level, not just the admin console.

Legal-aware configuration

Every policy is designed with litigation, regulatory, and compliance outcomes in mind—not just IT best practice.

Accelerators & templates

Pre-built policy sets, label taxonomies, and workflow templates reduce time to value by weeks.

Seamless handoff

Implementation connects directly to Consilio's managed services and eDiscovery platform for ongoing operations.

Who This is For

- **IT & Security teams** deploying or expanding Purview modules and needing hands-on configuration support
- **Legal Ops leaders** who have completed an assessment and need to operationalize the roadmap
- **Compliance officers** requiring defensible, production-grade governance before Copilot rollout
- **Records & IG teams** modernizing retention and lifecycle management within Microsoft 365

Typical Engagement

Week
1-2

Design & Planning

Solution architecture based on assessment findings. Policy design workshops with legal, IT, and compliance stakeholders.

Week
3-6

Build & Configure

Hands-on deployment of Purview modules, Copilot governance controls, sensitivity labels, DLP rules, and retention policies.

Week
7-8

Test & Validate

User acceptance testing, policy tuning, false-positive reduction, and compliance validation against regulatory requirements.

Week
9-10

Handoff & Enablement

Admin training, runbooks, escalation procedures, and transition to Consilio managed services or internal operations.
