

AI-POWERED INCOMING PRODUCTION ANALYSIS

Strategic insights from productions

🌐 consilio.com
✉ info@consilio.com

Consilio's AI & Analytics Team helps legal teams quickly understand the substance and implications of incoming productions from opposing parties. By combining advanced analytics with expert-led analysis, the team surfaces key facts, identifies critical documents, and reveals patterns across large production sets that may shape early litigation strategy.

This early insight allows counsel to assess the scope and relevance of what was produced, anticipate potential issues, and make informed decisions about next steps. The result is a clearer strategic picture that supports smarter review planning and more confident case direction from the outset.

A Collaborative, Insight-Driven Approach

Every Incoming Production Analysis begins with close collaboration between Consilio's AI & Analytics Team and the matter's subject matter experts. This upfront consultation clarifies litigation goals, areas of concern, and the specific questions counsel needs answered, ensuring the analysis is purposeful and aligned to case strategy from the start.

From there, the team applies a structured workflow that combines AI-driven insight with expert refinement. Advanced analytics are used to surface key facts, identify critical documents, and highlight patterns across the production, while analysts continuously validate findings and adjust focus as insights emerge. The result is a targeted, actionable analysis that delivers early clarity without overwhelming teams with unnecessary detail.

Incoming Production Analysis Deliverable Package

Each engagement produces a curated report designed to give counsel a clear, data-backed foundation for early strategy, including:

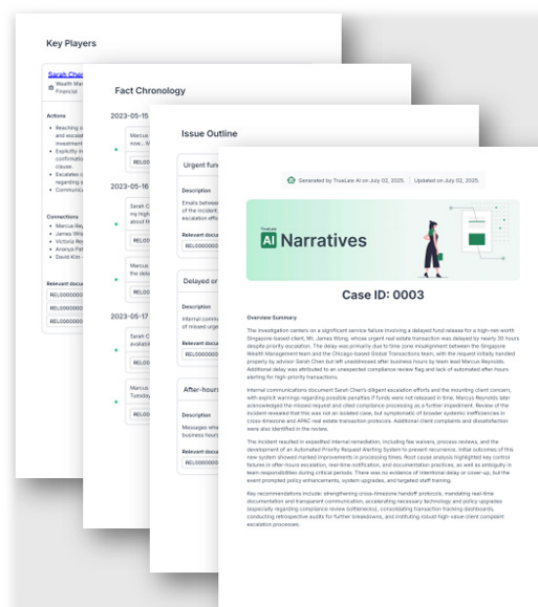

- A narrative summary of key facts and issues derived from the document set
- High-level insights into the volume and types of data associated with the deponent
- Visualizations of communication patterns involving the deponent
- A set of key documents identified through AI-driven analysis
- Workspace searches for both the cited documents and conceptually related materials
- Recommendations for potential follow-up workflows based on findings

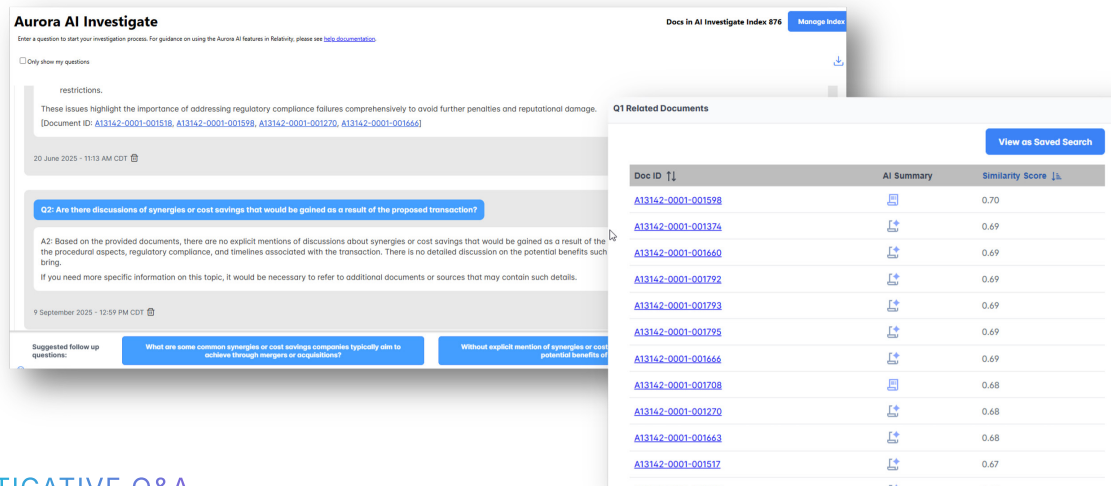

Component Overview

NARRATIVE GENERATION

Consilio's AI & Analytics Team uses AI-powered narrative analysis, **TrueLaw AI Narratives**, to synthesize large incoming productions into a clear, structured summary of key facts and issues. This narrative provides an early, high-level understanding of what the production contains, highlighting themes, timelines, and individuals that may be relevant to the matter.

The narrative is developed through an iterative process that combines AI-generated insight with subject matter expert input. As findings emerge, the team refines the analysis to ensure accuracy, relevance, and alignment with litigation priorities. Each insight is supported by linked source documents, allowing counsel to quickly validate conclusions and dig deeper where needed. The result is a concise, data-backed narrative that helps teams orient themselves faster and focus on what matters most.

INVESTIGATIVE Q&A

Building on the narrative analysis, Consilio's AI & Analytics Team uses **Aurora AI Investigate** to explore specific issues and questions within the incoming production. Through targeted, natural language queries, the team can quickly surface documents and context related to key facts, individuals, or events identified in the narrative.

Each response is grounded directly in the production data and includes citations to the underlying documents, making validation and follow-up straightforward. In addition to answering specific questions, this approach identifies clusters of related materials that may warrant deeper review. Investigative Q&A enables teams to move beyond high-level understanding and quickly test assumptions, refine strategy, and uncover evidence that might otherwise be missed.

POPULATION OVERVIEW

Consilio's AI & Analytics Team provides a high-level view of incoming production data to help counsel understand its scope and composition early. Using document metadata and expert analysis, the team summarizes volume, document types, and structural patterns across the production set. This overview enables legal teams to assess what was produced, identify areas of focus, and plan next steps with greater clarity and confidence.

COMMUNICATION ANALYSIS

Consilio's AI & Analytics Team analyzes communication patterns to show how individuals interacted across the production set. By visualizing relationships and key participants, this analysis helps counsel quickly identify important connections and areas for further investigation. It also provides valuable context that can inform issue prioritization and early case strategy.

FLEXIBLE FOLLOW-UP & EXPERT SUPPORT

After delivering the initial analysis, Consilio's AI & Analytics Team meets with counsel to walk through the findings in detail, answer questions, and validate how the insights align with litigation priorities. This collaborative discussion helps ensure the results are clearly understood, actionable, and positioned to support next steps in the matter.

Based on counsel feedback, the team can perform additional targeted analysis to explore newly identified issues, test emerging theories, or refine existing insights. Consilio's analytics consultants and AI prompt engineers remain engaged throughout this phase, providing hands-on support and guidance as teams continue to use the AI applications independently or request further expert-driven analysis. When appropriate, the team can also advise on follow-on workflows, including expanded analytics or review approaches, helping counsel transition smoothly from early insight into deeper investigation or production planning with confidence.

Why Choose Consilio?

Trusted Expertise

Over a decade of leadership in document review and AI technology.

Proven AI Solutions

Custom-built AI algorithms developed in-house, hosted on our secure private cloud.

Unmatched Support

Dedicated AI Guides, Review Managers, and Analytics Experts work with you at every step.

Get Started:

Consilio's AI and Analytics solutions help legal teams uncover insight faster, strengthen control, and drive smarter outcomes. Experience AI built for the way you already work, secure and efficient, and designed for confidence at every stage.
