

Declaration of Suitability for Mounting Feet on Synthetic Roof Coverings (EPDM, PVC, TPO)

Juli 2025

Cobalt Mounting Systems BV hereby declares that the mounting feet used in its mounting systems are suitable for installation on synthetic roof coverings, including EPDM, PVC, and TPO roofs.

The materials used in the mounting feet have been selected for compatibility with synthetic roof coverings. Special care has been taken to avoid chemical interactions between the mounting feet and the roof surface, such as the migration of plasticizers from the roof membrane or degradation caused by used plastics or metals.

Under normal conditions and when installed correctly in accordance with our installation manuals, the mounting feet will not damage the roof covering. No plasticizer loss or other forms of degradation occur that could adversely affect the watertightness or integrity of the roof.

An additional protective layer between the mounting foot and the roof covering is not necessary.
