

Vicarius' vision validated by Gartner's 2025 Magic Quadrant for EAP

We are excited to announce that Vicarius has been recognized in **Gartner's 2025 Exposure Assessment Platform (EAP) Magic Quadrant** as a Niche Player, a powerful validation of our remediation-first approach. In a crowded market focused on visibility and reporting, Gartner's inclusion confirms that Vicarius delivers what security teams actually need: faster risk reduction, shorter exposure windows, and verifiable outcomes. This recognition reflects what our customers already know, that eliminating risk, not just identifying it, is the true measure of progress. This latest acknowledgment follows two earlier mentions from Gartner in 2025, **Emerging Tech: The Future of Exposure Management is Preemptive** and the **Emerging Tech Impact Radar: Global Attack Surface Grid**. Together, these reports highlight the growing industry momentum behind Vicarius' vision: moving from static assessment to continuous, automated remediation. For our customers, it means confidence that they're investing in a platform aligned with Gartner's view of the future, one built to proactively close exposures, strengthen resilience, and simplify security in an increasingly complex landscape.

Key Benefits

Remediate Faster, Reduce Risk Sooner

Cut remediation timelines from weeks to hours with automated workflows that close exposures quickly, shrink attack surfaces, and strengthen overall security posture.

Simplify Security, Prove Compliance

Eliminate manual effort with built-in evidence tracking, policy-based automation, and audit-ready reports that make compliance effortless and measurable.

Stay Ahead with Preemptive Protection

Move beyond detection to continuous, automated remediation that prevents exploits before they happen, keeping your organization secure and always one step ahead of threats.
