

ketteQ Oslo

Precision in Every Move

Benefits

Explainable, auditable, and governed AI-driven decisions

Continuous optimization across demand, supply, and execution horizons

Salesforce-native collaboration with cross-cloud interoperability

Seamless Python extensibility for rapid innovation

Elastic scalability that adapts to planning peaks

Implementation in 3–6 months for accelerated time-to-value

Built on Salesforce and powered by PolymatiQ™, the world's first agentic AI solver engine, Oslo transforms adaptive planning into explainable, governed, and orchestrated decision-making – giving enterprises the clarity, composure, and control to plan every possibility.

Whether you're a manufacturer, distributor, or service organization, Oslo gives your teams the control to act decisively, guided by transparent logic and synchronized data. It's not just another release; it's the command center for the next era of supply chain planning.

Oslo is built for a connected enterprise. Whether you run Salesforce, SAP, Oracle, or hybrid systems, Oslo connects front-office CRM and back-office ERP environments into one synchronized decision network, aligning every cloud to every decision.

From Intelligence to Orchestration

At the heart of Oslo lies PolymatiQ's agentic AI, now enhanced with multi-stage synchronized solving, Salesforce-native scenario enablement, and real-time orchestration across clouds. Decisions are no longer black boxes; every plan is explainable, auditable, and governed.

Oslo connects front-office CRM and back-office ERP environments into one synchronized system of intelligence, bridging supply, demand, and execution for precision in every move. It empowers planners to model complex what-if scenarios, compare options, and deploy actions instantly, all while maintaining traceability and confidence.

Why ketteQ Oslo?

Oslo meets the speed and transparency today's multi-cloud supply chains demand. By combining agentic intelligence with governed orchestration across Salesforce and other ecosystems, it makes planning decisions explainable, collaborative, and instantly actionable. Built to unify CRM and ERP environments, Oslo delivers fast time-to-value through a Salesforce-native, system-agnostic architecture—empowering teams to turn complexity into composure, without rip-and-replace.

Top 5 Breakthrough Features

Salesforce-Native Scenario Enablement

Run and compare "what-if" scenarios directly inside Salesforce before committing. Oslo brings scenario planning into the CRM environment where business decisions happen, connecting revenue, service, and supply teams in real time.

Supply Chain Intelligence for CRM

Embed real-time supply, demand, and inventory visibility into Salesforce and other CRM systems. Oslo bridges the gap between what's promised and what's possible—so sales, finance, and operations teams can make every commitment with confidence and profitability.

Multi-Stage Synchronized Solve

Advancing from Dubai's two-stage intelligence, Oslo continuously re-optimizes across demand, supply, and allocation. This synchronization aligns every decision to business objectives, eliminating silos and reducing planning latency from weeks to days.

Pluggable Python Extensibility

Integrate and execute domain-specific models securely within Oslo's embedded, containerized Python engine. No bolt-ons or delays—just safe, governed innovation that evolves with your business.

Adaptive Decision Dashboards

Make every decision with live intelligence. Oslo delivers real-time KPI visibility and direct data access, enabling planners and executives to steer performance dynamically—without waiting for stale reports.

The Power to Decide Explained and Owned

With Oslo, supply chain leaders gain more than intelligence—they gain control. Every decision is transparent, every plan connected, and every outcome measurable.

That's precision in every move. That's Oslo.
