

ketteQ Solutions

Quintus

The Only Free-Range AI™ for Supply Chain,
Built for Real-Time Reasoning and Full Governance

Benefits

Faster, More Confident Decisions

Fully Governed Autonomy

No Rip and Replace

Cross-Functional Access

Advanced, Real-Time Reasoning

Most AI for supply chain planning is limited, capable of following a script but not built to reason through a question nobody prepared for. That is why so many competitor demos look impressive until you go off script. Quintus™, ketteQ's Free-Range AI™, reasons over any question, unscripted and unconstrained, executes any action, and addresses any use case across your entire supply chain. This turns planning from a fixed cycle into a continuous, real-time capability that keeps pace with how fast conditions actually change.

Quintus™, powered by PolymatiQ™, ketteQ's patent-pending agentic solvers, reasons through endless constrained planning scenarios simultaneously and returns the optimal answer in seconds. Ask Quintus™ anything, in plain language, and get a fully reasoned answer built on live data, not a static report generated on last week's assumptions.

Quintus™ operates within a fully governed and auditable framework, with every decision explainable and subject to human override. It runs above any ERP or planning system you already use, or as part of ketteQ's own Planning Solutions and Execution Solutions.

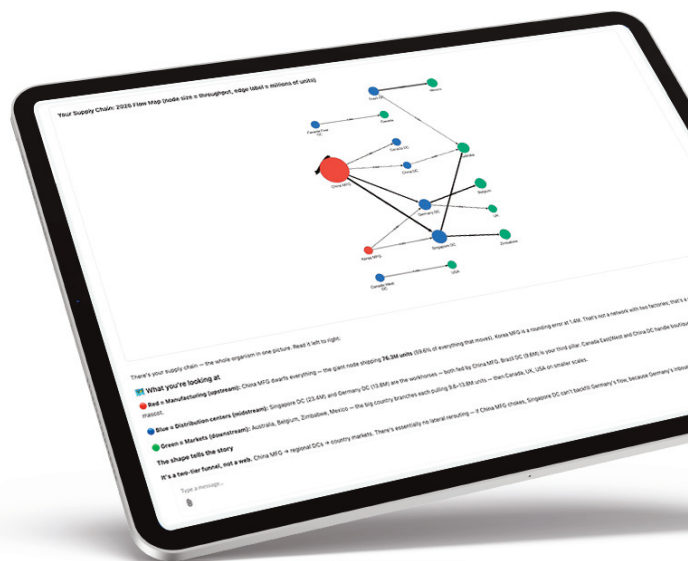

With Quintus™, your organization moves from reactive to proactive, giving every team, not just planners, direct access to the same real-time intelligence behind every decision, in the tools you already use every day.

ketteQ
Quintus
Free-Range AI™

Give every team direct access to Quintus™, ketteQ's Free-Range AI™, and reason through any supply chain question the moment it comes up. Powered by PolymatiQ™ Solvers, this platform lets you plan with confidence and act with speed.

Whether you're managing a disruption or exploring a new opportunity, Quintus™ keeps you ahead with real-time reasoning, unscripted scenario analysis, and fully governed decision support.

Unscripted Reasoning

Ask Quintus™ any question, in plain language, and get a fully reasoned answer built on live data, not a rehearsed response.

Fully Governed Autonomy

Every decision Quintus™ makes is auditable, explainable, and subject to human override, so autonomy never comes at the cost of trust.

Runs Above Any Planning System

Quintus™ deploys in four to eight weeks above what you already run, so you see results fast without disrupting your operations.

Unlimited Scenario Analysis

Quintus™ evaluates an unlimited range of possible outcomes in parallel, not on a fixed reporting cycle, so plans stay aligned with real conditions.

Available Where You Work

Ask Quintus™ questions or give it tasks and mission with a simple email, or directly inside Salesforce, Slack, or Microsoft Teams, without switching applications.

PolymatiQ™ Solvers

ketteQ's patent-pending agentic solvers evaluate countless planning scenarios and possibilities simultaneously to return the optimal answer in seconds.

Answers to Action

Quintus™ doesn't stop at better, faster decisions. When instructed, it generates system updates, emails, and workflows that help put every decision into action.

Cross-Functional Access

Sales, finance, operations, and planning can all ask Quintus™ direct questions and get the same real-time answer, without waiting on a report.

Automation, Not Autopilot

Quintus™ learns skills that run as missions, on a schedule or triggered by an event. Together, these missions form a playbook that automates tasks and workflows wherever possible.

Continuous Learning

Quintus™ learns from every decision and override, so its reasoning gets sharper the longer you use it.

Ready to see what Quintus™ can do?

With ketteQ's Free-Range AI™, your organization can reason through any question, act with confidence, and stay ahead of disruption.
