

CASE STUDY

reconfigurable boardroom table

WALLGOLDFINGER
FURNITURE

THE CHALLENGE

A company wants a boardroom table to match its logo. It's a complicated design of interlocking shapes with sharp edges that must meet precisely for the design to work. Oh yes, and parts of it must be reconfigurable. It is not an off-the-shelf project. What manufacturer could handle such a complicated design both from engineering perspective and from a fabrication perspective?

THE SOLUTION

WallGoldfinger Furniture designs, engineers and creates custom corporate furniture. It is known for a variety of things, but among those are large and complicated boardroom tables. Thanks to skilled designers and expert furniture makers working out of a state-of-the-art factory, WallGoldfinger Furniture creates unique, awe-inspiring furniture for the most discerning clients around the country. Add expert veneer sourcing and advanced CNC (computerized routing) capabilities, and WallGoldfinger stands apart as the perfect manufacturer for such a complicated piece.

The proof is in the results.

DESIGNER
Arcus Design Group

MATERIALS
Quartered walnut veneer, quartered maple veneer, solid maple, lacquer, steel with powder coating

UNIQUE ATTRIBUTES
Shape, edges, varied veneer grain direction, reconfigurability

"This table was quite a puzzle - literally. It was a balancing act in design, beyond the shape alone. Between the length and widths of the veneer, grain directions, substrate limitations, making sure we could process the parts through our equipment, and still making it functional for the user were very challenging. When you tossed in the reconfiguring aspects of the table and all that inlay, there were many frustrating days. Thankfully, there was no power or technology required."

"Eventually, all the puzzle pieces fit together. Then, our CNC and woodworking teams did a phenomenal job of making sure all those pieces fit tightly and looked great. It's definitely one of the most unique and beautiful tables we've done to date."
