

2017 Overview

Drowning is the respiratory impairment of lungs due to submersion/immersion in liquid.* It can be fatal (mortality), or non-fatal (morbidity). In this report non-fatal drownings are those resulting in a stay in hospital of 24 hours or longer and are classified as hospitalisations.

Drowning is the third highest cause of accidental death in New Zealand - after motor vehicle accidents and falls.

This report provides a summary of the preventable drownings (fatalities and hospitalisations) in 2017. It breaks down the numbers by age, gender, ethnicities, regions, activities and environments.

In 2017 there were 92 recreational (intending to be in the water) and non-recreational (no intention of being in the water) preventable drowning fatalities. The following analysis of fatalities is based on these 92 incidents in 2017 which represent an increase of 10, or 12 percent, compared to 2016.

13 additional fatalities have been classified as 'other or non-preventable drownings' (arising as a result of road or air accidents, homicide, suicide or of unknown origin). Details about these fatalities are not included in this report other than in the Table at the rear of the report.

Non-fatal drownings resulting in a stay in hospital of 24 hours or longer were 148 in 2018. This is a 29 percent decrease on 2016 and 20 percent decrease on the five year average (2012 – 2016). Throughout this report these are referred to as 'hospitalisations'.

More detailed information is available on request or available at www.watersafety.org.nz.

Tēnā Koutou,

Recreation in, on and around the water is a natural and popular pastime for millions of people in New Zealand. As an island nation, our beaches, rivers and lakes are some of the most magnificent in the world. A moderate climate, accessible waterways and public and residential pools provide ample opportunities for Kiwis, immigrants and tourists alike to recreate and participate in water sports and activities and go boating and fishing year round. This is part of the New Zealand lifestyle.

With any water comes risk and sadly every year far too many people lose their lives or are injured in, on or around the water. The tragedy is that most drownings and injuries are preventable.

While male drownings continue to dominate, eight more females fatally drowned in 2017 compared to 2016 and seven more than the five year average (2012 – 2016). Almost a third of fatalities in the 15 – 24 year age group were female, the highest female toll in that age group in 35 years.

2017 was a tragic year for toddlers and babies with seven infants fatally drowning compared to three the previous year. 71 percent of those fatalities were in home pools. And at the other end of the age spectrum fatalities almost doubled with 16 over 65 year olds losing their life. This is equivalent to the number of fatalities in the 15 – 24 year age group and is the highest of all age cohorts.

Immersion incidents, where the victims had no intention of being in the water, continues to be the largest cause of drowning followed by those who simply went for a swim which ended in tragedy.

Research* shows that while drowning is recognised as a problem by 84 percent of New Zealanders, (fifth behind child abuse, domestic violence, road safety and bullying) the reality is drowning is the leading cause of recreational death, the second highest cause of death for 1 – 24 year olds** and the third highest cause of accidental death in New Zealand.

The water safety sector is united in its commitment to the drowning prevention targets as detailed in the 2020 Water Safety Sector Strategy. They are ambitious targets however. The water safety sector, made up predominantly of volunteers is struggling to keep on top of this tragedy, which is the New Zealand drowning toll. The time is now for all New Zealanders to play their part.

Drowning Fatalities 1980-2017 and Hospitalisations 2003-2017

Progress towards New Zealand Water Safety Strategy 2020 Goals

Key Findings

92 preventable fatal drownings in 2017, up ten from 2016.

Highest number of fatalities among those Swimming.

7Under Fives fatalities in 2017. Increased from 3 in 2016 and highest toll since 2011. 5 were in home pools.

20 female fatalities. The highest rate since 2008.

38 female hospitalisations. The majority were due to Swimming (37%) and Immersion Incidents (37%).

16

Largest number of fatalities among the 15-24 years and 65+ year age groups.

16 in each age group.

Swimming fatalities were highest among 15-24 year olds.

71% of Powered
Boating fatalities
Were NZ Furopean

FATALITIES

79

FATALITIES

Hawke's Bay was the only region with no drowning fatalities in 2017.

Waikato (-59%) and **Northland** (-53%) had significant decreases in the drowning toll from 2016 and were both lower than their five year average.

Waikato rate was the lowest since 2006. **Northland** rate was the lowest since 2012. Waikato river drownings were down 70% on 2016 and 40% on the five year average. Over half of Waikato drownings were 65+ years.

Auckland's rate was almost double the five year average and more than twice that of 2016. It was the highest since 2011.

The **Canterbury** toll increased 80% on the five year average. 89% were immersion incidents.

HOSPITALISATIONS

Hospitalisations were down considerably on 2016 to 148 in 2017. It was the lowest rate since 2008.

Fatalities and Hospitalisations by Region 2017 (per 100,000 of Population)

HOSPITALISATIONS
PER 100,000 IN 2017

3

FATALITIES

West Coast had the highest drowning rate in the country per 100,000 of population followed by **Marlborough** and **Northland**.

In 2016, **Northland** had the highest rate at 10.9 and this has more than halved to 5.1 fatalities per 100,000 of population in 2017.

HOSPITALISATIONS

Northland hospitalisation rate was the lowest in the country. **West Coast** was the highest. While **Hawke's Bay** had no fatalities, the third highest rate of hospitalisations were recorded in this region.

2. Age

Fatalities by Age - 2017 vs Five Year Average

Fatalities by Age over time

Hospitalisations by Age over time

3. Gender

TOTAL

FATALITIES 72 20

HOSPITALISATIONS

110 38

FATALITIES

Highest female rate since 2008.

Male toll 3.7 x more than female toll.

75% of female fatalities were Immersion Incidents while 29% of male fatalities were.

HOSPITALISATIONS

The 2017 ratio was 2.9 males to every 1 female – higher rate than 2016 (1.7) and five year average (2.4).

The majority of female hospitalisations were due to Swimming (37%) and Immersion Incidents (37%). Top male hospitalisations were due to Immersion Incidents (29%), Swimming (28%) and Boating (20%).

4. Ethnicity

Fatalities

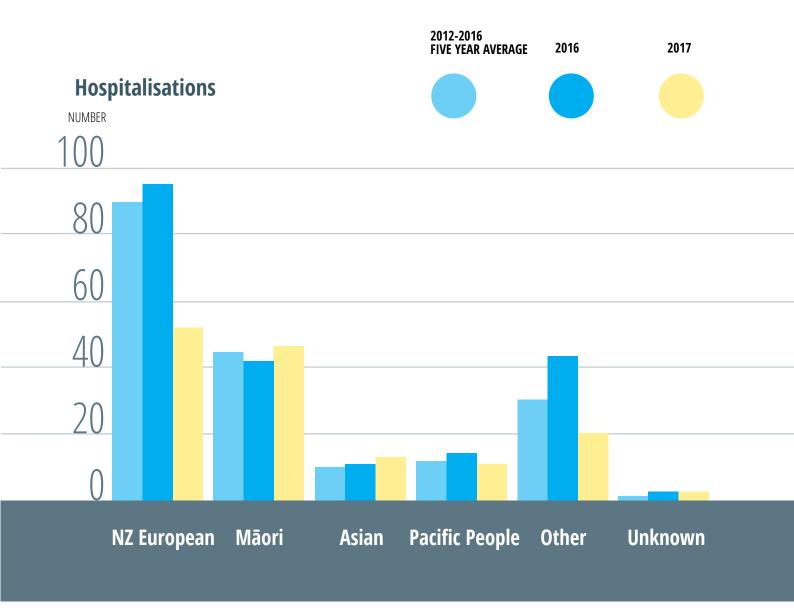

FATALITIES

2017 drowning fatality ratio by ethnicities were close to the total population ratios (NZ European 60%, Maori 16%, Asian 12%, Pacific Peoples 8%).

Māori fatalities decreased three from 18 in 2016 to 15 in 2017 with a reduction in fatalities at Beaches and Rivers. Offshore still remained high and half of the Underwater fatalities were Māori.

86% of Pacific Peoples fatalities were aged 15-34 years old.

43% Landbased Fishing fatalites were Asian and 33% were Swimming fatalities.

HOSPITALISATIONS

Despite a large drop in total hospitalisations in 2017, Māori were highly represented in hospitalisation statistics at 30% of the hospitalisation total (compared to 15% of population). Majority of Māori hospitalisations (82%) were aged under 25 years (the Māori population is 51% under the age of 25) with 44% due to an Immersion Incident and 29% to Swimming.

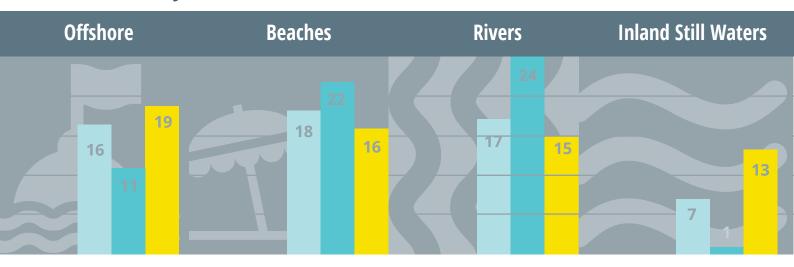

Swimming was the predominant cause of hospitalisation for Asians (67%) and Pacific Peoples (70%).

5. Environment

Fatalities by Environment

Fatalities by Environment over time

FATALITIES

Beaches fatalities decreased from 22 in 2016 to 16 in 2017 (27%).

Rivers fatalities decreased from 24 in 2016 to 15 in 2017. However there were five female fatalities in Rivers which was greater than the five year average of two.

The highest environment fatality category was Offshore with all fatalities male. 53% of those offshore fatalities were aged 35 – 54 years old.

65% of NZ European fatalities were Offshore, made up of Boating and Underwater incidents, and 30% of Māori fatalities were Offshore, all Underwater incidents.

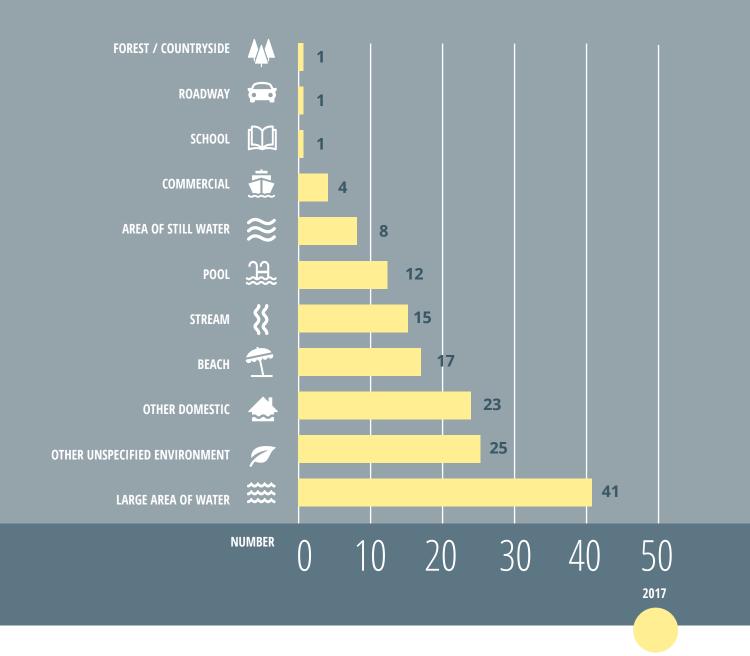

13 Inland Still Waters fatalities in 2017, up from one in 2016 and up 86% on the five year average due primarily to a doubling in Lake fatalities.

Home Pools fatalities were up 300% on the five year average, primarily due to five Under Five year olds drownings in home pools (usually an average of one per year).

Hospitalisations by Environment

67% of Pool hospitalisations were aged 14 or under.

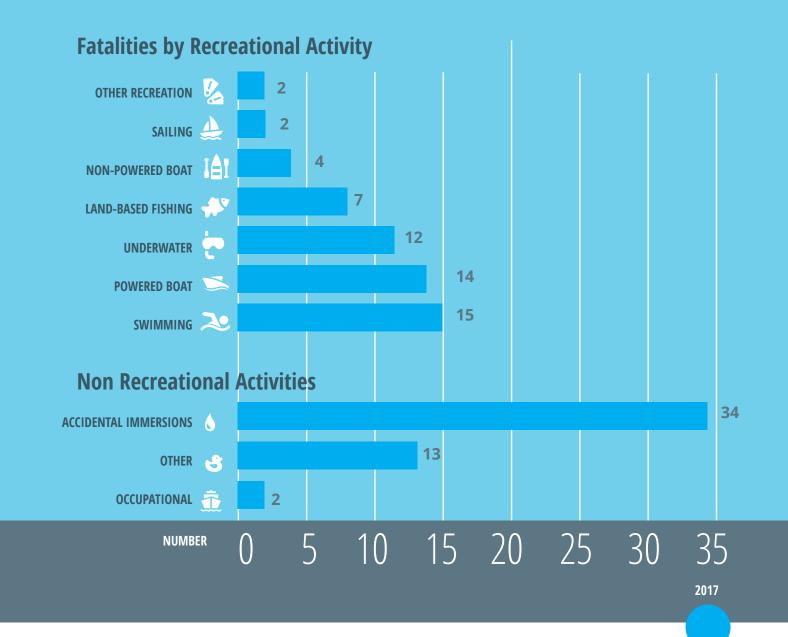

59% of incidents at Beaches were due to Swimming. Over half (53%) of Beach hospitalisations were aged 15-24 years. Beach hospitalisations were split almost 50:50 between Male and Female.

70% of Other Domestic Environments
hospitalisations were Immersion
Incidents and 65% of incidents
were aged 0 – 4 years old.

6. Activity

Recreational Activities fatality total was similar to 2016 however an increase in Immersion Incidents increased the total fatalities toll.

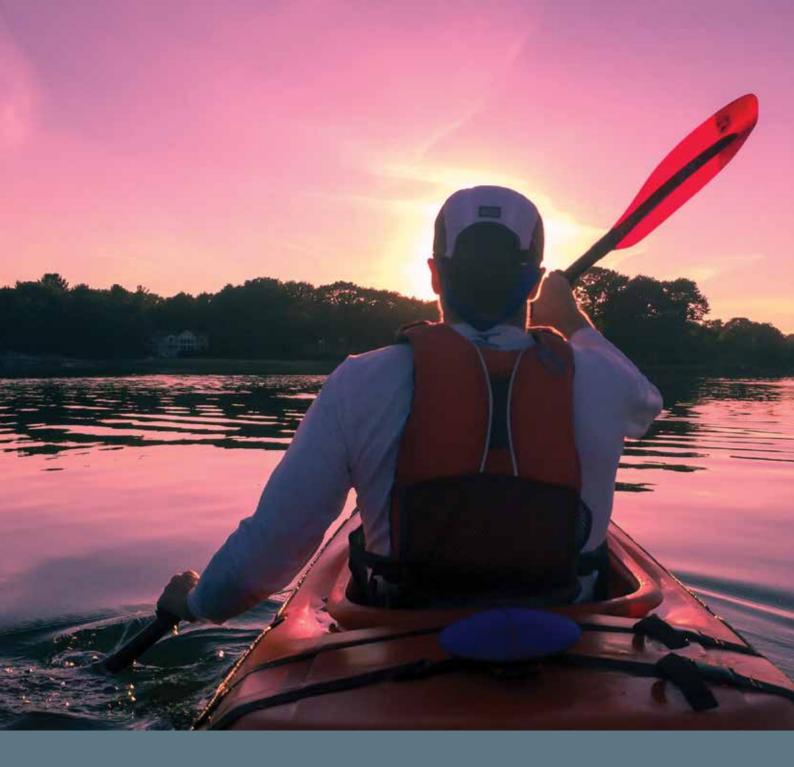

While Swimming had the highest fatalities rate by activity, this rate was down 35% on 2016 and down 17% on the five year average. Swimming fatalities were highest with the 15-24 year old group which was twice the five year average.

71% of Powered Boating fatalities were NZ European which were more than double the five year average of 33%. Half of Powered Boat fatalities were in Tidal Waters.

Underwater fatalities doubled from six in 2016 to 12 in 2017 and were more than double the five year average. Two thirds of divers were either alone or out of sight of diving partners when incidents occurred.

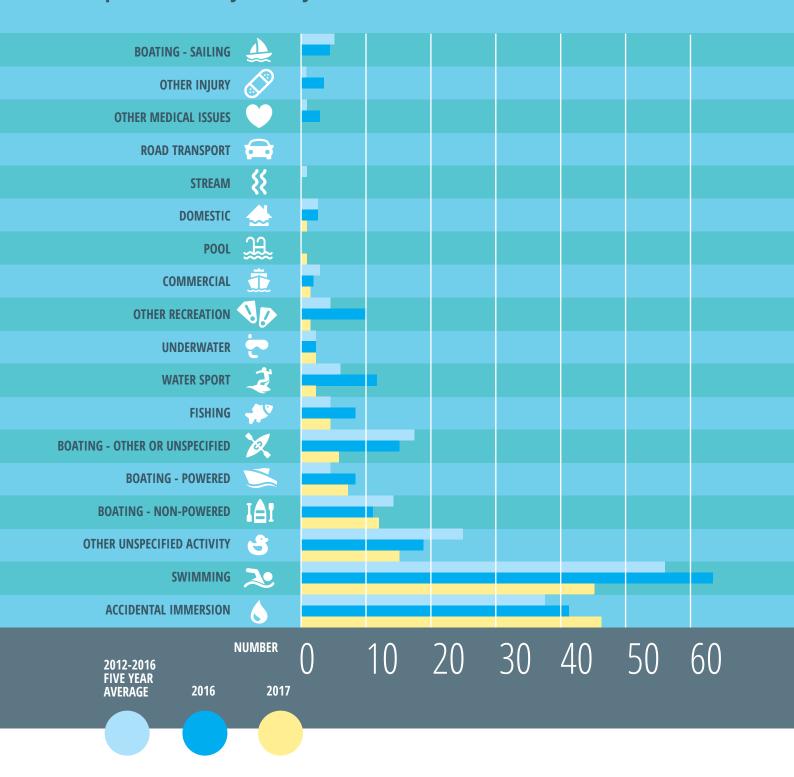

HOSPITALISATIONS

Despite the lower overall total, hospitalisations due to Accidental Immersions increased 12% on 2016 to 46 and 24% to 37 on the five year average. Māori Accidental Immersions made up the highest group at 43% of total. Other Boating hospitalisations were down, but Non-Powered Boat hospitalisations were up one from 2016 to 12 in 2017. 42% of Non-Powered Boat hospitalisations occurred in the 25-34 year old age group.

Hospitalisations by Activity and over time

Swimming hospitalisations were down 20% on five year average to 45, from 56. 73% of Swimming hospitalisations were aged under 25 and 36% were aged 15-24 years. Māori (29%), Asian (18%) and Pacific Peoples (16%) were overrepresented in Swimming hospitalisations.

OUR PURPOSE

To lead a step change in New Zealand so people don't drown.

OUR VISION

By 2025 more people in New Zealand respect the water and have the skills, knowledge and awareness to enjoy it safely.

WITH SPECIAL THANKS TO OUR GOVERNMENT PARTNERS
