I'm human

Reddit's use of cookies is described in our Cookie Notice and Privacy Policy. With this info, let's focus on Minecraft! Cows are amazing - friendly, easy to breed, and provide food, leather, and milk. The issue arises when they're hard to find near your base. To solve this, you can create a cow farm! To start, learn the mechanics and requirements for building one in-game. If you want to skip ahead, use the table below. Unlike other farms, cow farms can't be automated without using Minecraft commands, so you'll need to put in some effort. To make a cow farm, trap cows and breed them. Once your farm is overpopulated, kill the cows to collect rewards. Using an Allay can make the process semi-automatic. You'll need two cows, wheat (as many as possible), fences or less depending on the area, and a fence gate. Find the cows in the plains biome and its variants near villages, which also provide wheat. The crafting recipe for fences and gates requires sticks and wooden planks. Follow these steps to build your cow farm: 1. Find an open area (at least 4x4 blocks) avoiding cold biomes with snow. 2. Create a boundary using fences and add a fence door for entering the farm. 3. Use wheat to make cows follow you, then enter the farm. You'll need two to start but having more is better. 4. Activate the farm by holding wheat outside and feeding the cows when they approach. 5. When both cows are fed, a baby cow will appear! Minecraft Cow Farming Basics and Tips A well-designed cow farm can be a game-changer for Minecraft players. Here's a step-by-step guide on how to build an efficient cow farm: 1. Start by placing solid blocks outside the fence boundary. 2. Add water to one corner of the farm to create a flow that pushes cows into a designated area. 3. Replace the corner block with a hopper and surround it with magma blocks, which will kill the cows and collect their dropped items. To stop the flow of cows, simply remove the placed water. Unfortunately, there's no way to auto-breed cows in vanilla Minecraft, but mods can provide this feature. The size of the farm depends on your requirements, so start small and expand as needed. Dispensers cannot feed mobs directly, despite being a highly demanded feature. Wheat seeds are easily obtainable by breaking wheat or regular grass. This simple cow farm design has plenty of room for experimentation, making it perfect for beginners. However, if you want to level up, consider building a sculk farm first.
