Barnes Bullets, founded in 1932 by Fred Barnes in Bayfield, Colorado, has become a well-respected name within the ammo industry for its high-quality and innovative bullet designs. Initially, they created custom-made bullets tailored to individual shooters' needs. Their commitment to quality led to them producing some of the finest bullets available. In 1974, Randy Brooks took over and continued to innovate, introducing signature product lines that are widely recognized today. One notable innovation was the all-copper X-Bullet in 1989, which provided exceptional accuracy and eliminated lead contamination risks. The Barnes range includes popular bullet lines like TSX, TTSX, LRX, and VOR-TX ammunition. These bullets offer improved accuracy, deeper penetration, and long-range capabilities, making them ideal for hunting and target shooting. Additionally, the MRX Bullets, though no longer produced, were known for their enhanced ballistic coefficients and superior long-range performance. When seating the bullet, consider using a Stoner Point Gauge or other methods to determine optimal depth, as factors like neck tension and magazine length can limit seating depth. The TSX, TTSX, and LRX bullets have been found to be highly accurate in testing, with results comparable to match-grade bullets. In fact, Barnes Reloading Manual Number 4, which includes extensive loading data for these bullets, has been tested with over 200,000 rounds fired. This manual provides a comprehensive guide for reloading Barnes Bullets, including new cartridges such as the .338 Federal and .375 Ruger, as well as bigbore dangerous game cartridges like the .470 and .500 Nitro Express.
