Having an accurate understanding of your operating expenses is essential for running a profitable trucking business. The SmartHop Expense Calculator is a valuable tool to help you better comprehend how much it costs to run your business. Simply input your expenses and the calculator will update to provide you with your operating cost per mile, total monthly expenses, and average monthly profit after expenses. To use our cost per mile calculator, first add your annual mileage in all vehicles, then enter fixed costs and variable expenses. In the profit section, input average rate per mile. The calculator will display annual and monthly rates, as well as profitability. Adjust numbers to see how changes impact profitability.
