The Oral-B iO toothbrush has been upgraded to offer the best electric toothbrush experience with its revolutionary magnetic technology, providing a professional cleaning and gentle brushing experience. This advanced oral care product features enhanced A.I. and 3D teeth tracking capabilities for a more personalized cleaning. The iO Magnetic technology combines micro-vibrating bristles with Oral-B's dentist-inspired round brush head for an optimal clean feeling. Other notable features include a smart pressure sensor that displays red when brushing too hard and green when just right, an interactive color display showing mode settings and charging progress, and customizable modes like Daily Clean, Sensitive, and Whiten. The device also comes with real-time guidance through the Oral-B app, which uses Bluetooth and A.I. Brushing Recognition to coach users on proper brushing technique. The Oral-B iO is powered by a click-in-place magnetic charger that delivers a full charge in approximately 3 hours. This high-end toothbrush has received prestigious awards such as Best of Beauty 2020 Winner and Red Dot Award 2020 WINNER for its state-of-the-art technology, thoughtful design, and superior performance. The Oral-B iO offers several unique features compared to other models, including 3D teeth tracking and a travel charging case, making it a welcome upgrade to the Oral-B range. Its sleek design and quiet operation are also notable improvements. Notably, this brush helps users learn proper brushing techniques with real-time feedback from an interactive color display and pressure sensor. However, its high cost is a significant drawback, especially considering the need for special iO brush heads and a separate power adapter for the travel case. For those interested in advanced features without the iO's price tag, the Oral-B Genius X might be a more affordable option, offering AI-driven tracking of brushing habits and personalized recommendations for improvement. On the other hand, budget-conscious consumers might prefer the Vitality Classic, which boasts a simple design, comfortable grip, and essential features like a 2-minute timer without unnecessary bells and whistles or high cost. If you opt for a high-tech electric toothbrush, you'll miss out on features like pressure sensors and 3D cleaning actions. The Oral-B Smart Limited boasts smart tech that monitors your brushing pressure and adjusts automatically when it senses soft tissue. It has five modes, including gum care, to help prevent conditions like gingivitis or periodontal disease. The device tracks your movements with facial recognition and Bluetooth connectivity, offering real-time feedback on your brushing habits through a color-changing SmartRing. You can pair it with any Oral-B brush head, but be aware that some users have reported inaccuracies in the movement tracker. When choosing an electric toothbrush, consider battery life and features like pressure-sensing and tracking. Some studies suggest that Oral-B's oscillating heads provide better cleaning results than sonic alternatives, particularly in fighting gum disease. Here's a comparison chart to help you pick the best Oral-B option for your needs: Two oral care options are available: Ultimate Clean and Gentle Care. As with traditional toothbrushes, Oral-B brush heads should be replaced every three months or sooner if bristles become frayed. Some Oral-B electric toothbrush head options can be found in local supermarkets and drugstores, while others may require online purchase (links above). Generic brush heads are available but may not match the quality of original Oral-B products. Braun Oral-B offers various electric toothbrush models with different features and price points. Look for descriptors like iO, Genius, Smart, or Pro/Vitality to determine the level of technology and functionality. The best Oral-B toothbrush is ultimately a matter of personal preference, budget, and oral care needs. The entry-level model in the Series is the iO2, which is both the cheapest and most basic option. As you move up to higher models like the iO10, you'll find more advanced features and a bigger price tag. The main difference between each model lies in its feature set, with some offering additional cleaning modes, smart technology tracking, or other premium features. For instance, the iO3 through iO10 all come equipped with a 2-minute timer, 30-second quadpacer (20-second sextant pacer on the iO10), and a rechargeable lithium-ion battery providing long-lasting use between charges. However, the iO2 lacks some of these features, such as the smart visible pressure sensor and Bluetooth connectivity, which are standard on all other models except for the iO3. In terms of pricing, you can find the basic iO2 for \$65, while the feature-rich iO10 costs a whopping \$320. This significant price difference may be hard to justify, but keep in mind that prices often include a 20% discount on retail prices. All models within the range use the same iO-specific brush heads, so it's essential to consider the initial purchase price of the handle rather than the heads when calculating long-term ownership costs. If you're looking for the best value option, we recommend considering the iO6, which strikes a balance between affordability and advanced features like an in-handle display. On the other hand, while the iO10 is the most technically advanced model, its additional features may not be worth the extra cost. One notable aspect of some models is their display screen - three models feature color displays (iO7-8), providing more functionality, such as handle language changes and brushing mode selection. However, this doesn't affect their operation, which remains consistent across all models. The main difference between various Oral-B iO models lies not in their cleaning results but in the features they offer. Most users find a single mode, such as daily clean, to be sufficient for their needs. Additional modes like sensitive can provide benefits for new users or those with specific dental issues. The different modes utilize varying amounts of power, resulting in distinct brushing patterns and effects. The iO models have unique characteristics when it comes to mode selection and display. For example, the iO5 features backlit icons without text-based names, while other models may show an icon alongside text on the handle display. Models that connect via Bluetooth can report the active mode within the on-screen timer. Real-time tracking is a notable feature of some Oral-B iO models, particularly those with Bluetooth connectivity. The iO2 and 3 lack this functionality, whereas the Series 4 offers limited real-time tracking through its app connection. In contrast, models like the iO5 through to 10 provide comprehensive real-time tracking, including 16-zone tracking for the iO9 and 10, which may encourage more thorough brushing. However, the effectiveness of 16-zone tracking in everyday use is debated, as it requires consistent app usage. The tracked zones differ between models, with some allowing users to focus on a single surface within a zone and still be considered to have cleaned that area. As you brush each zone correctly, it disappears from view until none remain visible. The large visualization turns white as all teeth become clean. The extra detail in tracking can pick up on more specific improvements needed in your brushing routine. Although the iO10 has 16 zones tracking, the iO Sense stand gives feedback on 6 zones, offering benefits and at-a-glance feedback without a smartphone, but the app provides more meaningful data. There's no long-term data available to compare apps' beneficial impact compared to learning correct techniques via other means like plaque disclosing tablets. All iO models, except for the iO2, have a reminder system built into the app and handle. The iO3, 4, and iO5 have a yellow light that illuminates in the center of the cleaning mode button. Those models with displays will show notifications on the screen. A notification will also be displayed if connected to the Oral-B app for compatible models. Brush head reminders are a nice-to-have feature but not critical; they're included on each iO model, so you can factor them lightly into your choice of iO brush models. The Oral-B handles have long-lasting battery life, lasting 17-20 days on average. The exact battery life varies among models, with some having different capacities and motors. The displays in the premium models reduce usage time due to their activation upon vibration or movement nearby. Brushes take 12-24 hours to recharge when using the standard Oral-B charger, while the premium magnetic stand takes up to 3 hours to recharge the brushes. The iO7, 8, 9 and 10 chargers are compatible with these models and offer magnetic stands. For me, the extra cost of the charger isn't worth it, but those who value bathroom visuals might find it useful. The iO10 comes with an iO Sense charging stand that charges the brush in up to 3 hours, and includes 6 LEDs and a clock to provide feedback on brushing time and coverage. This feature is available only with the iO10, but increases the cost by \$80. The handles of all models offer some feedback on remaining charge, but the method differs. The majority of iO models come with travel cases provided in the box, while exceptions include the iO2 and 3 which do not have cases supplied. Some cases also differ in quality and functionality. Additionally, the iO9 and 10 can be recharged inside their cases using a separate power adapter. Available in classic colors like black and white, with some options also coming in other hues. Some Oral-B models feature a matching head color to their handle - for instance, black handles often come with a black brush head, while white or colored handles usually pair with a white one. Travel cases typically stick to a crisp white design, except for the sleek black versions. And when it comes to charging stands, you'll usually see them in white, but select Series 7, 8, and 9 models offer the option of a stylish black stand as well.
