

The New Standard In Tile Roof Ventilation

Coronado's patented Roof Vents are engineered specifically for concrete tile roof systems, offering maximum airflow while blending seamlessly into the roof's aesthetic.

Coronado Vents™ provide 100 square inches of NFVA (net-free ventilation area), ensuring maximum airflow while providing superior protection against water infiltration. Designed by roofers for roofers, they are easy to install, requiring minimal effort with maximum results. Our primary vent has a revolutionary shape, allowing water to flow around it, instead of behind it. The vent hole is approximately the same size and shape as other tile vents on the market, therefore making product substitution very simple. Coronado Roof Tile Vents have a sleek, attractive appearance, making them the new standard in concrete tile roof ventilation.

NFVA: 100 Square Inches
Net Free Ventilation Area

Coronado "S" Tile Vent

The Coronado "S" Tile Vent seamlessly integrates with surrounding "S" shaped concrete tiles. Available in Brown and Charcoal, they're prefinished to blend with most popular roof tile colors. Compatible with most major concrete "S" tile manufacturer profiles, ensuring versatile and precise roof integration.

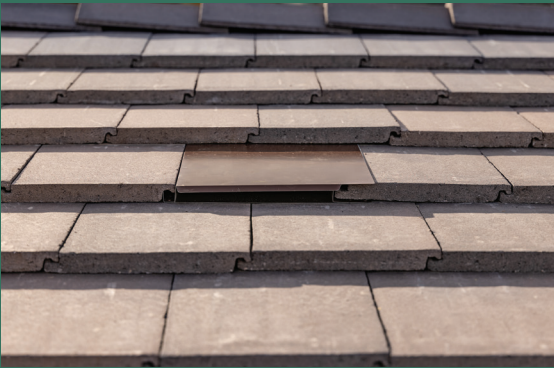

NFVA: 100 Square Inches

Coronado Flat Tile Vent

The Coronado Flat Tile Vent blends seamlessly with surrounding flat roof tiles. Available in Brown and Charcoal, they're prefinished to blend with most popular roof tile colors. Compatible with most major concrete flat tile manufacturer profiles, ensuring versatile and precise roof integration.

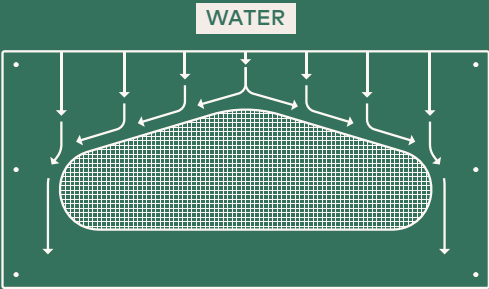

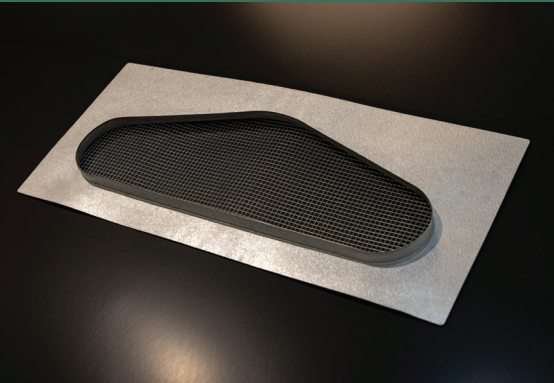

NFVA: 100 Square Inches

Coronado Primary Vent

The Coronado Primary Vent features a revolutionary design that forces water around the vent rather than behind it, eliminating the common "ramping" effect seen with other products. The hole size is similar in shape and size to other popular tile vents, making it a simple substitute for builders and architects.

Hole Size: 22.5" x 7.5"

Unlike other products, this design forces water around the Primary Vent, preventing buildup and eliminating pooling behind it.

PRODUCT DETAILS

Colors

Coronado Vents™ come prefinished in Brown and Charcoal with a standard 10yr paint warranty, saving your installers time by eliminating the need for painting. If a different color is desired, our finish can act as a primer, allowing for easy post-painting in the field. For large orders, ask about our custom color options.

***Disclaimer: paint scratches are not a cause for rejection**

Other patents pending

Packaging

Coronado Vents™ come in sets of 5, optimizing roof stocking, reducing shelf space, and simplifying transport. Efficient, compact, and designed for seamless storage and handling.

Primary Vents per Box: 5
Secondary Vents per Box: 5

Installation

Coronado Tile Vents install easily, like other leading vents. Cut a 22.5" x 7.5" hole, install the primary vent, and secure it with fasteners. Then install the secondary vent over the primary as per instructions.

Video and written instructions can be found on our website at coronadovents.com.

WHY OUR VENTS OUTPERFORM THE COMPETITION

Superior Color Options

Pre-Painted: Our vents come prefinished in Standard **Brown** and **Charcoal**.

Customizable: The primed surface allows for easy spray painting to match any roof color, providing a seamless look no matter the design.

Better Waterproofing

Coronado Vent's™ patented primary vent shape allows water to flow around the vent flange, instead of over it.

Competitive Pricing

Lower Overall Cost: Our vents are priced competitively, often coming in lower than our competitors, offering unmatched value for top-tier quality.

Convenient Packaging

Efficient Bundling: Our vents are conveniently packaged in smaller boxes (5qty per box), making storage, transportation, and loading easier.

Time-Saving Installation: This efficient packaging setup simplifies handling during installation, saving time and effort.

Better Looking

Coronado Vents™ take the place of ONE piece of tile and provide a better overall profile than other vents on the market. This allows the vent to "blend" into the roof.

Exceptional Ventilation Performance

More NFVA: Our vents provide more **Net Free Vent Area (NFVA)** compared to our competitors, ensuring superior airflow and better attic ventilation.

Find a Distributor

Coronado Vents™ are sold through all major roofing distributors.

Made in the USA

Contact Us

Coronado Vents™ are expertly crafted in the USA at our Phoenix, AZ facility. Please reach out to us and we'll get back to you within 1-2 business days.
