

How **Haugland Marine** simplified fleet tracking with **NeboFleet**

COMPANY OVERVIEW

Haugland Marine Services

Industry: Marine Transportation

Location: East Coast, U.S.

THE CHALLENGE

Before adopting NeboFleet, Haugland Marine tracked its vessels and barges using a manually updated Excel spreadsheet. This created:

- Daily time waste on manual entries
- Communication gaps across job sites
- Inaccurate billing and reporting
- Limited visibility into asset movement

THE SOLUTION: NEBOFLEET

TBS Safety recommended NeboFleet, a fleet tracking platform that offers:

- Real-time vessel and barge location
- Automated voyage logs and history
- Usage and efficiency metrics
- Log archives to support investigations

"The accuracy of the units and the easily navigable site made the decision simple."

— **Joe Stevenson, Assistant Port Captain**

EASY IMPLEMENTATION

- AA battery-powered devices for rapid installation
- Short onboarding with immediate adoption
- Immediate and measurable results

"We use Nebo to monitor barge movements across multiple job sites from a single dashboard. What used to take hours now takes minutes"

THE RESULTS

After rolling out NeboFleet, Haugland saw key improvements across their fleet operations:

- **Time Saved:** No more spreadsheet errors
- **Improved Communication:** Real-time data means fewer missteps
- **Streamlined Reporting:** Automated logs improve billing accuracy
- **Asset Protection:** Logs support incident investigations

"Nebo has made fleet tracking easy. It's hard to imagine not having it now."

Haugland see live tug and barge locations, as well as previous tracks and logs, from a single dashboard.
