

Vulcan Seals Type 207A  
Gorman-Rupp®  
Technical Data Sheet

Product Description

The Vulcan Seals Type 207A Gorman-Rupp® and Vulcan Seals Type 207B Gorman-Rupp® parallel spring diaphragm mounted seals are based on the Vulcan Seals Type A4J but with specific dimensions to suit the seal chambers and application of Gorman-Rupp® brand submersible pumps.

The Vulcan Seals Type 207A Gorman-Rupp® and Vulcan Seals Type 207B Gorman-Rupp® seals are intended for the adverse abrasive conditions associated with submersible pump duties and feature monolithic stationaries to reduce the number of O-rings. Some Vulcan Seals Type 207A sizes are supplied as kits with setting shims. Please also see the Vulcan Seals Type 207 data sheet for the design based on the Vulcan Seals Type 11J.

Why Choose the Vulcan Seals Type 207A Gorman-Rupp®?

The Vulcan Seals Type 207A Gorman-Rupp® design features a single-piece monolithic Carbide stationary, to remove the existing face and sub-housing arrangement.

Pump Ranges

The Gorman-Rupp® pump model includes the following pump ranges: "T®" series models with relevant size seals fitted.

Standard Face Material Combinations

Elastomers	Rotary Face	Stationary Face	Metals	Complete Seal Code
Viton™/FKM	VTN2 Tungsten Carbide	VTN1 Tungsten Carbide	304 Stainless Steel	.V.H.
Nitrile	VTN2 Tungsten Carbide	VTN1 Tungsten Carbide	304 Stainless Steel	.N.H.
