

Vulcan Seals Type 195P

Sulzer®

Technical Data Sheet

Product Description

The **Vulcan Seals Type 195P Sulzer®** is a 25mm shaft size seal intended to suit various ABS® submersible pumps, including certain "Jumbo®", "SP", and "RP" series, which were previously branded as "Pumpex".

The **Vulcan Seals Type 195P Sulzer®** is intended to seal the bearing chamber of these pumps, working in tandem with the Vulcan Seals Type 820 that seals the impeller. Please see the relevant data sheet for details on that seal.

Why Choose the Vulcan Seals Type 195P Sulzer®?

The **Vulcan Seals Type 195P Sulzer®** takes the design lead of the original seals with the performance benefits of the Vulcan Seals Type 19 rotary. These seals are supplied complete with the star ring that sets the rotary on the pump shaft.

Pump Ranges

The Sulzer® (former ABS®) pump model includes the following pump ranges: "Jumbo", "SP" and "RP" series with 25mm shafts.

Compliance & Certificates

The Vulcan Seals mechanical seal range can be supplied with material combinations designed to meet the compliance standards and certifications listed above. Additional compliance or regulatory requirements can also be considered upon request. Please enquire to discuss your specific application.

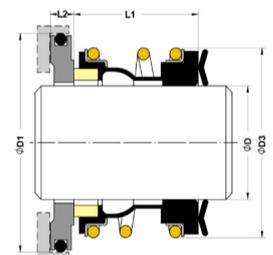

Standard Face Material Combinations

Elastomers	Rotary Face	Stationary Face	Metals	Complete Material Code
Nitrile	VCP1 Carbon	304 Stainless Steel	304 Stainless Steel	.N.Q.
