

# Vulcan Seals Type A52J

## Technical Data Sheet

### Product Description

The Vulcan Seals Type A52J is a robust, hydraulically balanced rubber diaphragm mounted parallel spring double seal design, developed from the proven Vulcan Seals Type A5J platform and intended for applications requiring enhanced leakage control and process containment.

The seal drive is provided by the diaphragm bellows tightly gripping the shaft and providing positive drive to both seal heads and sealing faces. The Vulcan Seals diaphragm seal designs are bi-directional 'pusher' seals that minimise shaft fretting, as the springs continuously provide energising force to the sealing faces and secondary seals.

The double seal arrangement allows operation with buffer or barrier fluid systems, providing improved lubrication of the seal faces and enhanced sealing performance in demanding process environments. Where barrier fluid systems are utilised, the barrier pressure is typically maintained above the process pressure to ensure positive barrier fluid flow across the seal faces, commonly around 1 bar (14.5 psi) depending on application and support system design.

Supplied with Vulcan Seals Type 31 'O'-ring-mounted stationaries, designed to suit common USA market imperial extended-length seal chambers with anti-rotation provision.

### Why Choose the Vulcan Seals Type A52J?

- Robust, regular working length, highly accommodating and reliable rubber diaphragm double seal, with enhanced seal capability, performance, and durability.
- Featuring a self-adjusting seal head design with face retention and hydraulic face balancing to maximise primary and secondary sealing performance.
- The Vulcan Seals Type A52J has a narrow profile, allowing clearance into a greater range of pump seal chambers.
- 'O'-ring mounted stationaries with anti-rotation provision provide security in high torque applications such as viscous or high solids media.
- Double seal configuration enables use with buffer or barrier fluid systems to improve process containment and sealing reliability.
- A widely utilised mechanical seal type suited to medium to heavy duties and capable of long service.

### Standard Face Material Combinations

Rotary Face   Material	Stationary Face   Material	Complete Material Code
VCP1 Carbon	VAW1 Ceramic	C
VCP1 Carbon	304 Stainless Steel	Q
VCP1 Carbon	VIN1 Ni-Resist	F
VCP1 Carbon	VSR1 Silicon Carbide	D
VCP1 Carbon	VTN1* Tungsten Carbide	E
VSR1 Silicon Carbide	VSR1 Silicon Carbide	S
VTN2* Tungsten Carbide	VTN1* Tungsten Carbide	H

Guaranteed Stock/Material Elastomers: Viton™/FKM, EP, Nitrile and Metallurgy 304SS

\*Non-stock guarantee

### Elastomer Temperature Capabilities

	Minimum	Maximum
Nitrile	-30°C	+120°C
EPDM	-40°C	+140°C
Viton™/FKM	-30°C	+230°C
FEPM/AFLAS®	-10°C	+250°C
FFKM	-50°C	+315°C

Pressure: Up to 26 bar (377 psi)

### Compliance & Certificates

The Vulcan Seals mechanical seal range can be supplied with material combinations designed to meet the compliance standards and certifications listed above. Additional compliance or regulatory requirements can also be considered upon request. Please enquire to discuss your specific application.

### Mechanical Seal Replacement Range

Vulcan Seals Type A52J is a dimensional replacement mechanical seal for the following seal ranges:

- John Crane® | Type 1 (USA)/Type 3 seat\* - Double Seal

\*Rotary Face | \*\*Stationary Face

**Dimensional Data**

**Maximum Operating Pressure**

The PV Chart shows the maximum operating pressures of this Vulcan Seals type, based on the seal face materials used. Different lines on the chart indicate different material combinations, as shown underneath.

It also assumes stable operation in a clean, cool, lubricating and nonvolatile fluid with an adequate flush rate.

For more in-depth pressure rating calculations based on specific material combinations and application conditions, please consult us.

**PV Chart**

**Application Conditions**

Criteria	Multiplier	
Product Fluid	Lubricating fluids	X 1.00
	Aqueous solutions / Water	X 0.85
Temperature	Below 70°C (158°F)	X 1.00
	71°C to 120°C (160°F to 248°F)	X 0.85
	121°C to 175°C (250°F to 347°F)	X 0.75
	Over 176°C (349°F)	X 0.60
Speed	Up to 1750 rpm	X 1.00
	1750 to 3600 rpm	X 0.80

**Face and Seat Materials**

Combination	Multiplier
Carbon vs Ceramic	x 0.50
Carbon vs Stainless Steel	x 0.30
Carbon vs Ni-Resist	x 0.30
Carbon vs Silicon Carbide	x 1.00
Carbon vs Tungsten Carbide	x 0.90
Silicon Carbide vs Silicon Carbide	x 0.50
Tungsten Carbide vs Tungsten Carbide	x 0.50

**Example Calculation for Vulcan Seals Type A52J**

- A. Shaft size: 38mm therefore pressure is 25 bar (from PV Chart)
- B. Media: Water (multiplier = 0.85)
- C. Temperature: 50°C (multiplier = 1.00)
- D. Speed: 1450 rpm (multiplier = 1.00)
- E. Face combination: Carbon vs Silicon Carbide (multiplier = 1.00)

For this particular Vulcan Seals Type A52J seal size, the calculation for the approximate guidance maximum operating pressure would be:

A x B x C x D x E  
 25 bar x 0.85 x 1.00 x 1.00 x 1.00 = 21.25 bar

**Guidance Only**

Please note that due to the many operational and application variables that affect seal performance, the information given on this page is for guidance only.

We therefore strongly recommend careful individual testing and monitoring of all seals and related equipment for any proposed application.

Our policy is one of continuous technical and efficiency improvement. As such, all specifications may be subject to change without prior notice.
