Empower Tirzepatide

Accurate dosing of injectable medications is paramount to your safety and treatment success. At Hush Medical Spa, your well-being is always our highest priority.

Each syringe is filled by a fully licensed and medically trained provider, following strict protocols to ensure precision and consistency. We take every measure to ensure you receive exactly what has been prescribed — no more, no less — with the quality and care you deserve.

You can feel confident knowing that your treatment has been prepared with expert hands and your best interests at heart

Tirzepatide (mg)	Fill in mL	Units (U)	Niacinamide dose in mg
2.5	0.15	14.7	0.3
3	0.18	17.6	0.4
5	0.29	29.4	0.6
7.5	0.44	44.1	0.9
10	0.59	58.8	1.2
12.5	0.74	73.5	1.5
15	0.88	88.2	1.8

Your syringe may display one or both of the following scales:

- “U” (Units) — typically used for insulin syringes
- “mL” (milliliters) — the standard metric measurement, also equivalent to cc (cubic centimeters)

For reference:

10 Units (10U) = 0.1 mL = 0.1 cc

At Hush Medical Spa, we prepare your syringe with precision. A slight overfill of **1 Unit (0.01 mL)** is included intentionally. This small buffer allows you to expel any air bubbles before injection **without compromising your prescribed dose.**

This meticulous approach ensures both accuracy and safety in your self-administered care.
