

# Aeropak Biocides

Effective insect protection

# BIOCIDES

Biocides are used for both the prevention and control of insects that may pose a nuisance or risk to humans, animals, food products, and materials.

## Effective biocides

– tested and certified according to the highest standards

At Aeropak, we develop and manufacture effective and safe biocidal products – always in full compliance with current legislation and stringent quality requirements.

Biocides are products designed to combat or prevent unwanted organisms such as flies, ants, and other crawling or flying insects. In many contexts, biocides are a necessary part of ensuring hygiene, comfort, and protection for both people, animals, and equipment.

### Typical areas of application

**Private households** – control of ants, flies, and crawling insects in and around the home

**Agriculture and livestock facilities** – effective insect control in environments with high hygiene requirements

**Businesses and industry** – where insect-free zones are essential for operations and quality

### Biocides and legislation

At Aeropak, we have reviewed and updated our entire biocide portfolio in accordance with the current EU Biocidal Products Regulation (BPR). The products have been thoroughly tested, documented, and re-certified in 2025 to meet the strictest requirements for safety, quality, and effectiveness.

For our customers, this means complete peace of mind – Aeropak's biocides are future-proof and ready for use, both now and in the years to come.

## Aeropak's biocide solutions

Aeropak offers a range of specially developed insect sprays, tailored to different needs.

Biocides are a core part of Aeropak's business. Our in-house experts have extensive knowledge of development, production, and regulatory compliance, ensuring our customers receive products that meet all applicable requirements.

### We manufacture, among other things:

- StaldChok, MyreChok, and ProChok
- Private label products under the customer's own brand
- Customer-specific formulations targeting specific insect types and purposes
- Special solutions adapted to market, environment, and application

We produce both under our own name and on behalf of customers domestically and internationally – and can deliver everything from formulation and documentation to fully filled spray cans.

Proven 100% effective insect control

### 100% effectiveness in insect control:

- Ants (100% in 1 minute)
- House and stable flies (100% in 20 seconds)
- Mosquitoes (100% in 10 seconds)
- Wasps (100% in 4 minutes)
- German cockroaches (100% in 50 seconds)
- Oriental cockroaches (100% in 2 minutes)
- Silverfish & Paperfish (100% in 20 seconds)

## Safety & peace of mind

At Aeropak, we are specialists in aerosol filling. Every day, we fill a wide range of products into spray cans for well-known brands both domestically and internationally, ensuring their products are easy and convenient for end users to apply.

We approach our customers' projects with great care and professionalism, and our skilled specialists always ensure that you receive the most optimal solution for your specific product.

### High quality without compromise

At Aeropak, we never compromise on quality. Our products undergo extensive random sampling and testing in our in-house laboratory to ensure they meet the strictest requirements for functionality, safety, and durability.
