

KNOW WHY YOU STRUGGLE WITH WEIGHT LOSS SO YOU KNOW WHAT TO DO.

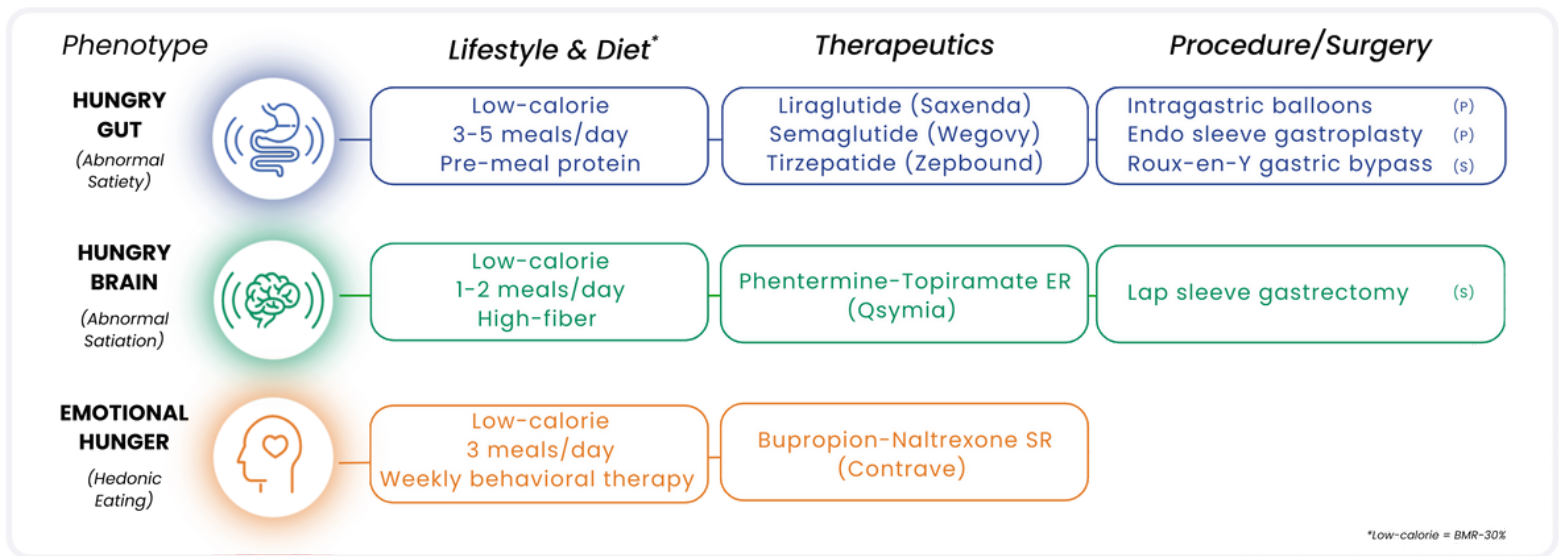

With weight loss medications gaining global popularity, it can be confusing to know which medication is the most effective and cost-efficient for you.

MyPhenome® Test identifies weight loss treatments that work best for your biology, allowing you to **lose more weight than the reported averages of typical interventions.**

MYPHENOME GUIDED TREATMENT LEADS TO 2-5X GREATER WEIGHT LOSS.

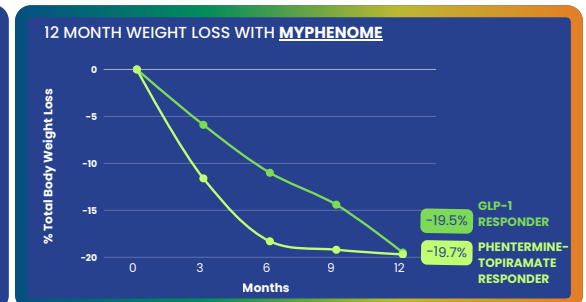

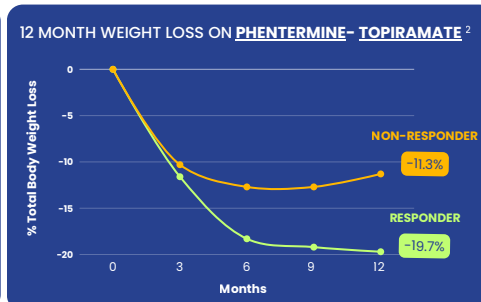

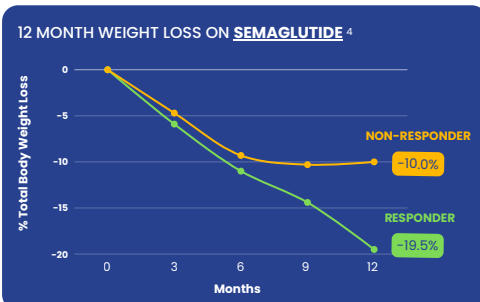

For a patient who weighs 200 pounds, **MyPhenome Test** can mean the difference between losing **14 lbs vs. 74 lbs** in 12 months when put on the right medication.⁴

DID YOU KNOW NOT ALL PATIENTS RESPOND TO GLP-1 MEDICATIONS?

Due to differences in our underlying biology, some people are non-responders to certain medications. Typically, you wouldn't know you are a non-responder until you have spent months on expensive and painful weekly injections that lead to little to no weight loss.

MyPhenome Test™ helps determine which treatments are best suited FOR YOU to effectively achieve meaningful weight loss.
