Clinical Voice+

AI Voice Perio Reference Guide

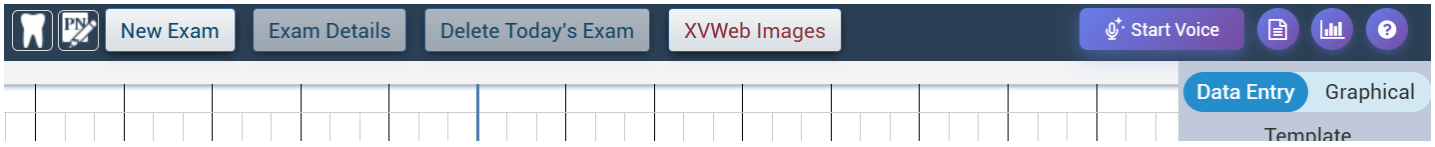

Overview

AI Voice Perio offers Denticon users hands-free voice-enabled periodontal charting. The feature allows clinicians to record perio findings directly into the Perio Chart using voice commands. After a completed recording, a Perio Report Card will populate an AI-powered summary, providing patients with an assessment of their periodontal health in accessible language.

Getting started

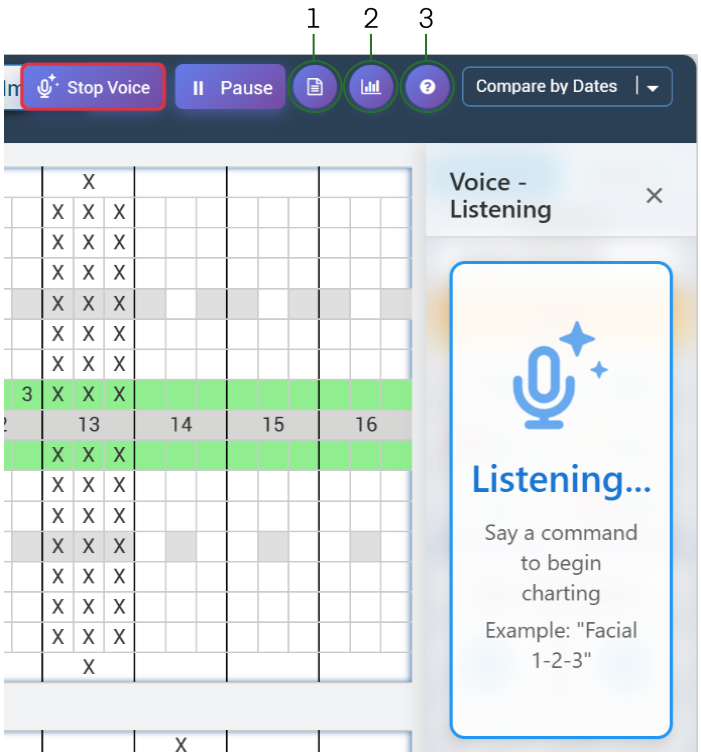

1. In **Denticon**, search for and select the patient whose periodontal chart you want to complete.
2. Select **Charting** → **Advanced Charting** or **Charting** → **Perio Chart**
3. Click **New Exam**.

SEP 2026

4 Click **Start Voice** to begin voice recognition.

5 Say a command to begin charting.

No.	Name	Description
1	Health Assessment Report	A comprehensive periodontal evaluation of gum health along with personalized treatment recommendations; often referred to as a "Perio Report Card"
2	Voice Charting Adoption Report	Shows trend of organization-wide adoption of voice charting
3	Voice Commands Help	A quick reference sheet of how to format voice commands.

NOTE: The UI above looks slightly different than **Advanced Charting**, which does not offer a perio report card or adoption report. There is also no **New Exam** button.

Basic controls
