

Hypori Secure Messaging

Available as a stand-alone secure messaging app or seamlessly integrated within Hypori Mobile, Hypori Secure Messaging is part of the Hypori Secure Workspace Ecosystem bringing virtual, zero trust messaging to your fingertips. Unlike consumer apps and unsanctioned platforms that expose organizations to compliance gaps and Shadow IT, Hypori Secure Messaging eliminates that risk.

By embedding secure, compliant and auditable messaging inside the Hypori workspace, organizations gain a controlled channel for internal communications supporting eDiscovery, legal investigations, and regulatory data retention requirements. It keeps official communications separate from personal use, ensuring every conversation stays secure, discoverable, and compliant without relying on invasive MDM/MAM controls.

With Hypori Secure Messaging, enterprises can finally close the gap between convenience and compliance: removing risky consumer apps, enforcing zero trust collaboration, and giving employees a private, bring your own device (BYOD)-friendly way to connect without compromising organizational security.

Key Value Propositions

Compliant & Auditable

A secure channel for official communications, with conversations retained for eDiscovery, investigations, and regulatory requirements.

Privacy Guaranteed

Personal data and activity stay untouched, with security limited only to official communications.

Zero Trust by Design

Messages never reside on the device, eliminating risk from theft, cloning, or exposure.

Simple & Lightweight

Quick to deploy and adopt, with no training, agents, or device management required.

Compliance Ready

Supports CMMC, DFARS, FedRAMP, HIPAA, and other regulatory standards.

What Sets Hypori Secure Messaging Apart

Secure Messaging Hub

Chat, group messaging, file sharing, and broadcast tools inside a virtual environment with full audit trail.

Closed-loop Protection

Device → backend → recipient, never leaving the secure environment, eliminating interception risk.

Cross-Platform

Seamlessly works across iOS and Android through Hypori.

Key Advantages of Hypori Secure Messaging

Secure by Design

Messages are secured, retained, and auditable to support compliance and accountability with no company data touching personal devices.

Industry Compliant

Purpose-built to meet the strict requirements of defense, finance, healthcare and other regulated industries.

Convenient BYOD

Simple user adoption, no intrusive software or device management.

Proven Trust

Powered by the same Hypori platform trusted across government, defense, civilian, intelligence, finance, and healthcare sectors.

Compliant Architecture

hypori.com

Hypori Secure Messaging extends Hypori's zero trust architecture to collaboration.

Meets DoW CC SRG IL5, FedRAMP High, NIAP Common Criteria.

Supports alignment with CMMC, DFARS, and the No TikTok on Government Devices Act.

Use Cases

Government & Defense

Secure communications for leaders, contractors, and agencies driving mission-critical decisions.

Finance

Confidential collaboration between advisers, executives, and analysts.

Global Enterprises

Trusted messaging for executives and teams across the organization, wherever they work.

Healthcare

Real-time collaboration on diagnoses and care, reducing costs and improving patient outcomes.

Reduce Risk and Liability

Total Privacy

No monitoring of personal use, no device wipes or seizures.

Secure Collaboration

Isolated workspace prevents leaks, breaches, and unauthorized access.

Worry-Free BYOD

Safe separation of enterprise communications from personal activity.

Choose how you deploy:

As a stand-alone secure messaging app or as part of Hypori Mobile. Either way, you get compliant, zero trust collaboration without compromise.
