One Device, **Zero** Worries

2025.2.1 Release

July 24th, 2025

Hypori Platform 2025.2.1 Release

This document summarizes the key improvements for the **2025.2.1 minor** release of the Hypori Platform. These updates are available to Hypori Cloud customers on AWS including those with deployments in their own AWS accounts.

This release includes key security updates, product enhancements, and bug fixes for enhancing user experience, strengthening platform security, and improving overall reliability. Highlights of this release are as follows.

Security Updates

We have improved platform security by updating key components to fix vulnerabilities and enhance protection. Below is a summary of the implemented security updates.

- **Purebred Registration Microservice:** Patched container image to address known vulnerabilities.
- **RHEL Base OS:** Upgraded to a newer version with recent security updates.

Platform Improvements and Bug Fixes

This release introduces improvements to overall user experience and environment management. Key highlights are outlined below.

- **Hibernation Settings**: Admins can now adjust hibernation timeout settings (or disable hibernation) without disrupting active user sessions.
- **OTP QR Code Generation**: Restricted QR code generation for OTP setup to authorized administrators only.
- **Faster Device Wake-Up**: Virtual devices now begin waking at the start of the authentication process, reducing connection time when devices are inactive.
- **Virtual Device Boot Logging**: Improved logs to better support troubleshooting during boot failures.
- **Purebred Registration Logging**: Added correlation IDs to logs for easier end-to-end session tracing.
- **Console Instance Type Accuracy**: Ensured the instance type shown in the Hypori Console matches the actual underlying cloud instance.
- **Hypori App Gallery Enhancements**:
    - App names are now sorted alphabetically, and searchable helping users find what they need quickly and easily.
    - The app gallery auto-refreshes in the background when a new version is available.
- **Migration of Users to Hypori Flex**: User migration to Hypori Flex will occur seamlessly with no action required by users. All user data is preserved, and the transition happens automatically—no steps, prompts, or interruptions for end users. Just a smooth switch to Hypori Flex.

Virtual Device Improvements and Bug Fixes

This release improves Hypori virtual devices with enhanced security, better app compatibility, and improved functionality.

- **Android Security Patches**: April–June security updates are now included in the virtual device base images.
- **Base Template Availability:** Templates are auto provisioned to simplify management. Separate templates are available for Commercial and Federal environments.
- **MDM Compatibility:** Ensured support for the latest Android Device Policy Controllers.
- **Notification Replay Fix:** Offline notifications are no longer replayed as duplicates once the device becomes active.
- **Teams Call Notifications:** Muting/unmuting in Microsoft Teams no longer triggers unnecessary push notifications.
- **Recommended Android Builds:**
    - Pre Hypori Flex:
        - Android 13: Build 330
        - Android 15: Build 47
    - With Hypori Flex, image selection is simplified, template versions are pre-associated with appropriate builds. Administrators need only choose the desired Template version.

Android 13 Deprecation

Android 13 on **Hypori virtual devices** will be deprecated on **December 1, 2025**. Until then, Android 13 will continue to receive critical bug fixes and security updates only (no new feature development). All new features will be available **exclusively** on Hypori Flex Android 15 virtual devices.
