

Hypori

One Device, **Zero** Worries

2025.3.1 Release

Oct 7th, 2025

Hypori Platform 2025.3.1 Release

Available for all Hypori Cloud customers on AWS, including customer-managed accounts

This minor release delivers important security updates, bug fixes, and usability enhancements across Virtual Devices, App Gallery, Enrollment Portal, and Console 2.0. These improvements strengthen reliability, accessibility, and overall user experience.

Virtual Device Fixes and Improvements

- **Security**: Virtual Devices now incorporate the Android 15 2025Q3 security patches**,** keeping devices protected with the latest updates.
- **Collaboration Apps**: Outlook and Teams connect consistently to secure content, even during autoscaling events.
- **PIN Management**: Screen lock PIN resets no longer require re-entry, simplifying the process.
- **Biometrics**: The “last login” timestamp remains visible after biometric authentication.
- **Kiosk Mode**: Virtual Devices with a PIN requirement now function seamlessly in Kiosk mode.
- **UI Fix**: On some iPhone Pro models, the top-left clock now displays fully without being cut off.
- **MicroG Template:** Users are now prevented from entering Google credentials when using the microG template.

App Gallery Fixes and Improvements

- Fixed incorrect or negative counts displayed during automatic app updates.
- Improved error recovery and retry handling for app update installations.
- Enhanced out-of-disk-space error recovery when multiple apps install concurrently.

Hypori

One Device, **Zero** Worries

2025.3.1 Release

Oct 7th, 2025

- Resolved a race condition where canceling an installation could report the app as missing.
- Fixed an issue where launching apps via keyboard in landscape mode caused the keyboard to obscure the app.
- Added a “Cancel” button next to the filter input box to dismiss the keyboard.

Other Fixes and Improvements

- **Enrollment Portal**: Unauthorized users now see a clear message instead of a blank page; and Administrator client certificates can now successfully access the online enrollment API documentation (Swagger).
- **Console 2.0**: Disconnect policies are now generated correctly.
- **Control Plane**: Hypori control plane host operating systems updated to a recent RHEL version, incorporating security updates.
- **Bliss Launcher**: Users can now delete web page bookmarks saved to the home screen; and fixed issue ensuring home screen app icons are not obscured by hot seat icons (at the bottom of the home screen).
