

blyAspire: An Aspire Acumatica Integration

*Integrated financial and supporting data flows between
Aspire and Acumatica*

Defined Integration Flows

How blyAspire Works

Built on the Acumatica Platform

blyAspire is built natively within Acumatica, using Acumatica screens, processing capabilities, scheduling security and standard accounting workflows.

Defined Data Flows

Each integration process has a defined source and destination based on the record or transaction type.

Flexible Processing

Integration processes can be run manually or scheduled using standard Acumatica automation capabilities.

Creation-Focused Synchronization

Records and Transactions are created in the destination system. Once synchronized, subsequent changes are not automatically synchronized.

Acumatica Accounting

Integrated financials activity is created through the appropriate Acumatica subledgers and follows standard Acumatica posting processes to the General Ledger.
