EziPod GEO data logger

The EziPod GEO is a portable, battery-powered depth, speed and tension recorder suitable for safe areas.

EZiPod™ GEO

Benefits:

The EziPod GEO is highly transportable DST recorder, housed in a dedicated IP67 hard case.

The swappable battery is a standard C-cell, making it easy to source and replace.

Built as a cost-effective option for non-hazardous land operations, EziPod GEO is compatible with Eztek's popular TallyView software, allowing clients to create the same detailed, accurate and highly readable charts that other Eztek products are known for.

Typical Applications:

Geothermal; safe area well pad operations

Features:

- 4.4" LCD module display (monochrome)
- Four touch-button operation
- 1/sec sample rate
- Powered by standard C-cell batteries
- In-field battery swap capable
- 1.3kgs with batteries (1.2kgs without batteries)
- CSV file format
- USB port for data/file transfer
- File-to-report graph/plot capability if used with TallyView software

Basic operation:

- Switch the unit ON and unit displays real time depth, line pull (tension) and line speed
- Enter operator and well number (max 4 characters)
- Set zero offsets if required and start recording
- Stop recording and download recorded data to PC via USB port
- The memory provides approximately 20 days of data storage
- Generate job chart/plot using TallyView software
