twiist™ AID System: Workout Preset and Pre-Meal Preset

Workout Preset

Circled sections highlight a Temporary Status banner, a raised correction range, and active Workout Preset.

The **Workout Preset** can be used to temporarily raise your Correction Range for activities.

When the **Workout Preset** is active:

- the button color will be inverted
- a Temporary Status banner will appear
- the Glucose Chart will update to show the change in the Correction Range

The **Workout Preset** can be in effect for one of the following time options:

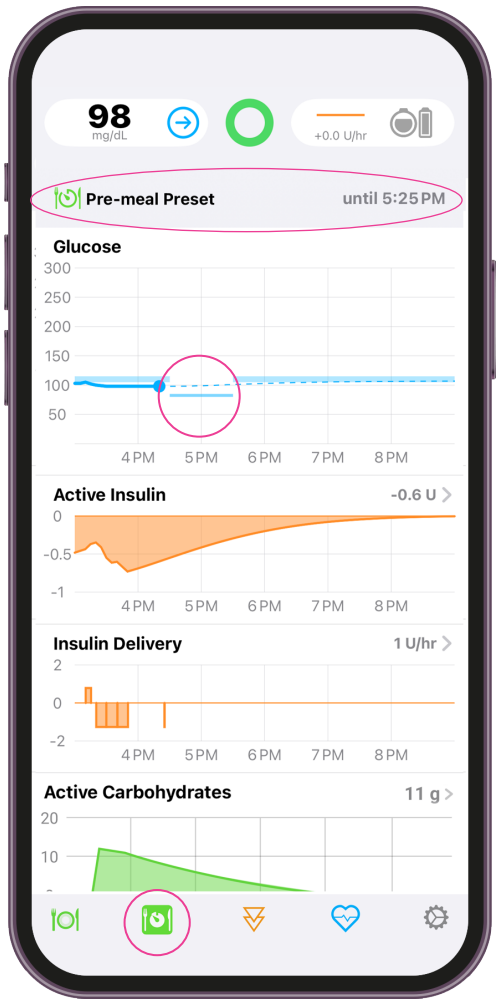

- one hour
- two hours
- until turned off

The twiist App will display a **Workout is Still Active** notice after 24 hours: *Workout has been turned on for more than 24 hours. Make sure you still want it enabled, or turn it off in the app.*

To cancel an active **Workout Preset**, select the button.

Workout Preset is unavailable when Loop is off. When Loop is off the Workout Preset button is used to manually set a Temporary Basal.

Pre-Meal Preset

Circled sections highlight a Temporary Status banner, a lowered correction range, and active Pre-Meal Preset.

The **Pre-Meal Preset** can be used to temporarily lower your Correction Range before a meal. This can help reduce blood sugar spikes after eating.

When the **Pre-Meal Preset** is active:

- the button color will be inverted
- a Temporary Status banner will appear
- the Glucose Chart will update to show the change in the Correction Range

The **Pre-Meal Preset** stays on for up to one hour, unless canceled or carbs are entered.

To cancel an active **Pre-Meal Preset**, select the button.

Pre-Meal Preset is unavailable when Loop is off. The button will be grayed out and unable to be selected.

Customer Care: 1 877-4TWIIST (1-877-489-4478)

The twiist™ Automated Insulin Delivery (AID) System is for people with type 1 diabetes, 6 years of age and above, available with a prescription, only in the U.S.
