

The Credential That Transforms

Stop Managing Keys, Start Managing Access

Finally, credentials that just work. Achieve complete system flexibility while eliminating key management headaches.

LEAF Verified is a next-generation physical access control credential built on NXP's MIFARE DUOX technology that delivers enterprise-grade security without operational complexity. Using public key cryptography, LEAF Verified eliminates the burden of managing encryption keys while transforming your access card into an interactive service platform by unlocking integrated NDEF technology services.

Why Security Experts Choose LEAF Verified

Deploy faster. Scale without complexity. Stay in control.

Eliminate Key Management Burden

Forget about key sharing, key rotation schedules, and complex key infrastructure. LEAF Verified uses public key cryptography to eliminate key management entirely.

Lower Total Cost of Ownership

Reduce your operational costs by eliminating key management and simplifying credential deployment. Fewer moving parts mean less maintenance, fewer training requirements, and less ongoing administration.

Enterprise Security Made Simple

Get bank-level security without the complexity. Robust protection against cloning, replay attacks, and unauthorized access, all managed automatically without adding administrative overhead.

Your Current Reality vs. LEAF Verified

Cumbersome Key Management

Zero Key Management

Hours of Badge Enrollment

Minutes of Badge Enrollment

Multiple Single Purpose Cards

One Credential for All Access

Security Through Obscurity

ECC-based authentication with
EAL 6+ certification

Unlock Possibilities: More Than Just a Credential

Transform Access Into An Innovative Platform

Digital Manifest Technology

Digital manifest for simplified enrollment, validation, and to provide partners access to the NDEF feature and customizable solutions for value-added solutions.

Leverage a Growing Ecosystem

LEAF Verified's NDEF capability elevates the credential into a platform with unlimited potential. With a growing ecosystem of support and services, you could use the same credentials for secure information delivery, employee services, future digital workplace initiatives, and more.

Credential Freedom

Maintain complete control with LEAF credentials and true vendor neutrality. Your investment works across multiple manufacturers' systems—your choice, your timeline, your future partners.
