

Change the way you think about onboarding identities

LEAF Universal credentials combine a digital credential footprint, or manifest, with a physical credential for **easy enrollment** and **credential management**. Each LEAF Universal credential package comes with a QR code to be scanned in order to access the badge information via digital manifest. After accessing, simply upload all badge information to your access solutions in an easier and more secure manner.

Importance of Manifest

True Security

Printed value on a card correlates to the card data in the manifest. This protects you in the event of a lost card and the values are not sequential preventing potential duplication.

Open API

Allows access control software partners to automate badge enrollment from the time of order placement

Streamline Enrollment

Simply download and upload all badge data to your system. No need to manually enter badge data upon enrollment

How to use the Digital Manifest?

LEAF Universal credential packs come with a unique QR code that leads to the digital data on the credential. The Digital Manifest can be downloaded as a CSV for internal tracking and enrollment needs. The credential data can then be uploaded to an access control system as well as other systems, to remove the need to manually enroll badges across systems.

Every LEAF Universal credential is programmed with a unique 12 digit Universal ID. The ID is not sequential and is not printed on the exterior to add an extra layer of protection to an end user's access control ecosystem. Data can be easily enrolled using the Digital Credential Manifest by referencing the printed ID on the credential.

Value of Manifest

For Access Control Software Providers: Give your channel partners a simpler path to system set-up and badge enrollment. Utilizing the open digital manifest API, you can pre-load all badge data for a site as the order is placed, eliminating manual processes to scan or manually key in badge data. This represents a significant value-add over legacy credential systems

For the Enterprise: With the digital manifest, manage all of your unique access solutions from a single upload. Whether you're giving access to your parking garage or your elevator – the digital manifest makes it simple.

For Integrators: Reduce administrative time to set up and configure a site. With the digital manifest you can simply upload badge information and assign credentials to users.
