## GT Clonex Clone Solution

Specifically formulated for healthy, fast and vigorous root growth and development.

### Benefits

#### *PRECISION FORMULATED NUTRIENT*

- ✓ **Promotes profuse root development** with targeted nutrition for cuttings and seedlings.
- ✓ **Reduces propagation and transplant stress** with added thiamine support.
- ✓ **Eliminates guesswork and pH adjustments** with a stable, pre-buffered formula.
- ✓ **Assists rapid nutrient uptake** thanks to a highly bioavailable composition.
- ✓ **Protects delicate roots** while delivering all 12 essential minerals at optimal strength.

"During propagation and the first few weeks after moving plants from soil to LECA, I rely on a mix of GT Clonex Clone Solution and GT Rootzone to support healthy roots and smooth transitions."

NORA / @THELECAQUEEN / AUSTRALIA

# growth technology

## Guide

GT CCS delivers complete nutrition to help cuttings and seedlings establish and develop healthy root systems.

### ROOT FEEDING

Use 5ml per litre of water at each watering. Ideal for young plants, new cuttings, and ongoing propagation schedules.

### FOLIAR FEEDING / SPRAY

Apply 3ml per litre of water as a fine mist to both sides of leaves in low light conditions. Delivers rapid uptake for cuttings before root establishment.

### WATER PROPAGATION

Use 5ml per litre of water when rooting cuttings in water. Refresh solution weekly to maintain nutrient availability and prevent bacterial buildup.

### PLANT RECOVERY

Apply 5ml per litre of water to plants experiencing transplant shock, stress, or damage. Deliver as a root drench or foliar spray for accelerated response.

## Grower's Tips

For best results, apply GT Clonex Rooting Hormone Gel at the point of cutting to trigger root initiation, then maintain with regular GT CCS feeds to drive root development. This pairing delivers both the hormonal signal and nutritional support required for reliable propagation.

"GT CCS is one of the most underrated products in my opinion. It helps my plants recover from stress due to frequent chopping or yet another house move! I've had consistently successful plant propagation with GT CCS."

JAN / @SYDNEYPLANTGUY / AUSTRALIA

## GT CCS

GT Clonex Clone Solution (CCS) contains all 12 essential minerals in a single, highly bioavailable formula designed for the critical rooting phase.

Just as plants require different nutrition during vegetative and flowering stages, cuttings demand their own specialised feeding during establishment. GT CCS delivers a targeted mineral profile with added thiamine to prioritise root development – the foundation of successful propagation.

GT CCS is pH buffered to work with most tap water sources without adjustment, eliminating the guesswork and ensuring consistent, optimal nutrient uptake from the first feed.

GT CCS is equally effective for transplant recovery, stress management and supporting young plants through their establishment phase.

AVAILABLE IN 250ML / 1 LITRE / 5 LITRES / 20 LITRES
