

VikingClad®

Danish GRC with flexibility and strength built in

VikingClad® represents the premium standard of GRC from BB fiberbeton - developed for architectural projects that demand both creative freedom and technical reliability.

Produced in Grade 18P, VikingClad® combines thin, lightweight panels with exceptional durability and weather resistance.

Available in multiple surface expressions VikingClad® offers an unmatched design palette. Choose between everything from smooth concrete to exposed aggregates, or pick between multiple BRiCK solutions (in pure GRC or with real brick inlays).

Engineered for façades, balconies, parapets, cornices, and ornamentation, VikingClad® supports early-stage project specification by providing a flexible, tested, and visually striking solution that architects and engineers can rely on.

With VikingClad®
your vision becomes concrete

VikingClad® GRC

- Grade 18P GRC
- Supports large elements, 3D shapes, & complex geometry
