

Comirnaty expiry: Blue cap and maroon cap

Comirnaty XBB.1.5 10mcg blue cap and 3mcg maroon cap vaccines

Vaccine shelf life has recently been extended for storage in freezer.

This means the expiry printed on vial may have passed, but the **vaccine is still viable**.

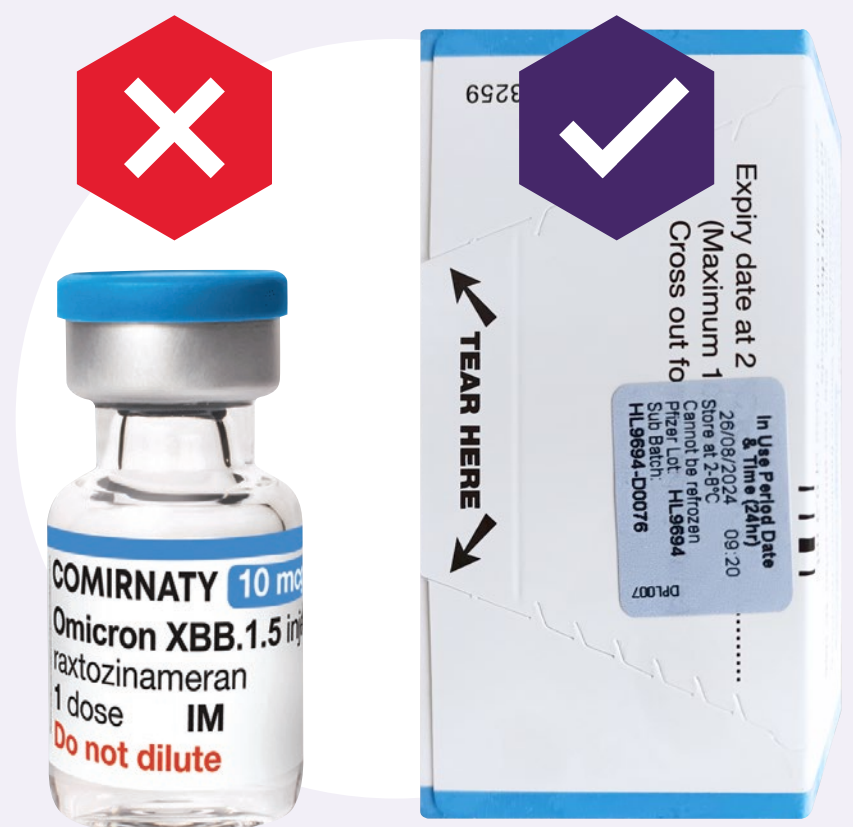

Always follow 'in-use' expiry on box

Vaccinators must always use the 'in-use' expiry printed on box.

Expiry printed on box supersedes vial expiry.

Always keep vials with the box they arrived in.

Site stores vaccines at 2°C to 8°C and work from expiry on box not the vial.

Vial may appear expired, but as long as expiry on box is in date, is still valid.

**NO CHANGE IN THESE
IN-USE TIMES/STORAGE
CONDITIONS.
DO NOT SEPARATE
VIALS FROM BOX.**
