

How I Stacked It

Mayday

Intercompany

*"We have a group treasury function, and expenses that come in and out of every organisation, with about 8 different intercompany loans. When **Mayday** came along it was a game changer! Suddenly we could track all of the intercompany transactions and easily carry out recs across the group from one interface. The team live within the Balancer and BRAG functions daily."*

Project Management

*"**Harvest** has been great. We carried it over from when we used to own a consulting business within the group, even though we have much less client project management these days as we utilise implementation partners for our software. It's still a must-have tool to track both our client and internal projects."*

getharvest.com

Project Management

*“**Mosaic** is a bit more advanced and a bit more expensive, but what I like about it is that it can pull information from multiple data sources and from all of your different Xero entities on a real granular transaction level. As part of the onboarding, you work with their FP&A specialists to integrate your pre-existing financial models into their app which allows you to spend more meaningful time on the forecasting and planning itself.”*

mosaic.tech

Mayday

Def Rev & Prepayments

*"I was looking at apps to automate our deferred revenue and our prepayments schedules as we have a few across the different entities and we're moving away from spreadsheets. Since **Mayday** brought out these new tools, I've stopped looking and can't wait to be using this across all of our entities!"*
