

Ultra® 3500kg Car Transporter

The AKFS Ultra® Car Transporter is a purpose-engineered 3500kg GVW vehicle transport solution, designed to maximise payload, improve weight distribution and deliver exceptional driving characteristics within the 3.5-tonne category. Combining the proven benefits of the AL-KO chassis conversion with AKFS's lightweight galvanised transporter body, it provides a dependable and highly capable solution for professional vehicle recovery and transport operators.

Whether transporting cars, light commercial vehicles or specialist vehicles, this purpose-built transporter has been engineered to make the very best use of its available gross vehicle weight. Its extended wheelbase, optimised chassis design and generous payload capacity help improve axle load distribution, providing operators with greater flexibility and confidence during day-to-day vehicle transport operations.

The lightweight galvanised chassis is designed to maximise payload without compromising strength or durability, while the extended wheelbase and torsion bar suspension work together to deliver improved stability and predictable driving characteristics whether the vehicle is loaded or unloaded. Combined with 8-foot load-certified aluminium ramps, multiple vehicle securing points and a practical loading arrangement, the finished conversion is engineered to deliver dependable performance throughout its working life.

Built on the proven AL-KO chassis conversion, every AKFS Ultra® Car Transporter is configured around your operational requirements rather than supplied as a standard conversion. From selecting the most appropriate vehicle specification through to the finished conversion, our Product Specialists work with you to deliver a transporter that provides the payload, driving characteristics and operational performance your business demands, both today and into the future.

Standard Features:

- Lower overall deck height to accommodate vehicles with low front spoilers
- 8-foot load-certified aluminium ramps
- Extended wheelbase for improved weight distribution across the front and rear axles
- Eight surface-mounted securing points
- Galvanised chassis with steel torsion bar rear suspension for improved driving characteristics when loaded or unladen
- Vehicle securing straps
- Aluminium front crash bar

Optional Features:

- Electric winch system
- Aluminium helper ramps
- Punched decking for over-wheel securing straps
- Lockable storage locker
- Compact LED light bar
- LED work lights
- Rear parking sensors

What chassis options are available?

The AKFS Ultra® Car Transporter is built on the proven AL-KO chassis conversion, available on both the Fiat Ducato and Peugeot Boxer Back-to-Back cabs. This purpose-engineered platform combines an extended wheelbase with improved weight distribution and generous payload capacity, delivering excellent driving characteristics and making the most of the available 3500kg GVW.

If you have a preferred chassis manufacturer or specific operational requirements, our Product Specialists will be happy to guide you through the available Fiat Ducato and Peugeot Boxer specifications and help configure the right solution for your business.
