

WANAWARE: SOLUTIONS BRIEF

WanAware

Intelligent Observability for Actionable Insights.

See everything, everywhere.

Comprehensive visibility into every Connected Asset—both in the cloud and beyond—is more critical than ever. While cloud operational and security control is vital, approximately 90% of an organization’s infrastructure, applications and services reside outside of the cloud.

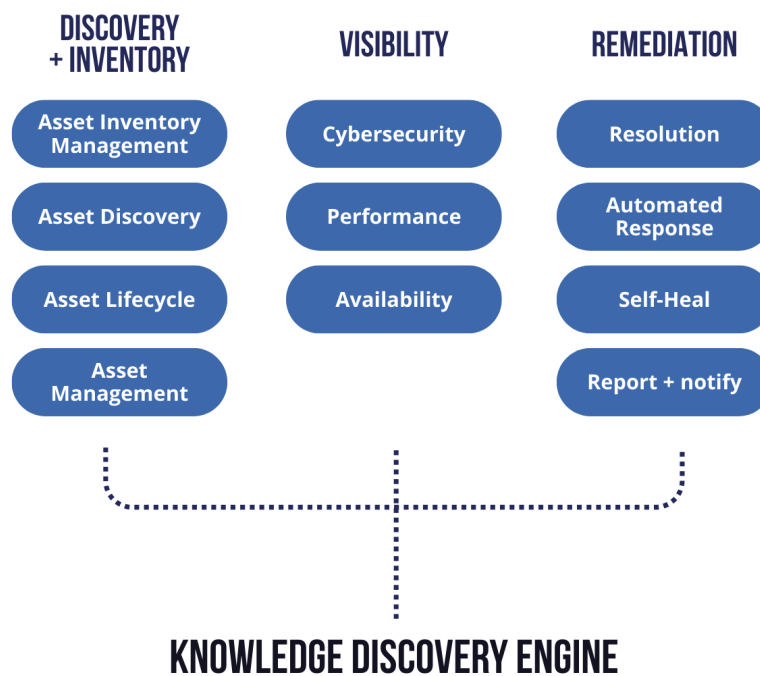

These Connected Assets form a complex network of dependencies and interdependencies that are challenging to understand, leading to increased operational and security risks for organizations and extended remediation timelines.

WanAware provides observability for your entire environment, covering both cloud and on-premises or distributed assets.

Security incidents both inside and outside the cloud can trigger a series of adverse events, including risks to sensitive data, dissatisfied customers, violations of compliance regulations, and a significant loss of trust.

WanAware provides intelligent observability for all your connected assets, in the cloud and beyond.

WANAWARE'S INTELLIGENT OBSERVABILITY

Your assets go beyond the cloud. Your visibility should too.

WanAware is an easy-to-deploy, consumption-based Intelligent Observability platform that provides instant, actionable insights into the cybersecurity, performance, and availability of any Connected Asset, enabling rapid risk identification and remediation.

Connect to any cloud environment and extend your reach to IoT, IT, remote users, branch locations, headquarters, and regional offices. Gain visibility into everything, everywhere, allowing you to focus on what matters most. Anticipate potential issues, observe all costs, and eliminate unused assets so you aren't paying for what you aren't using.

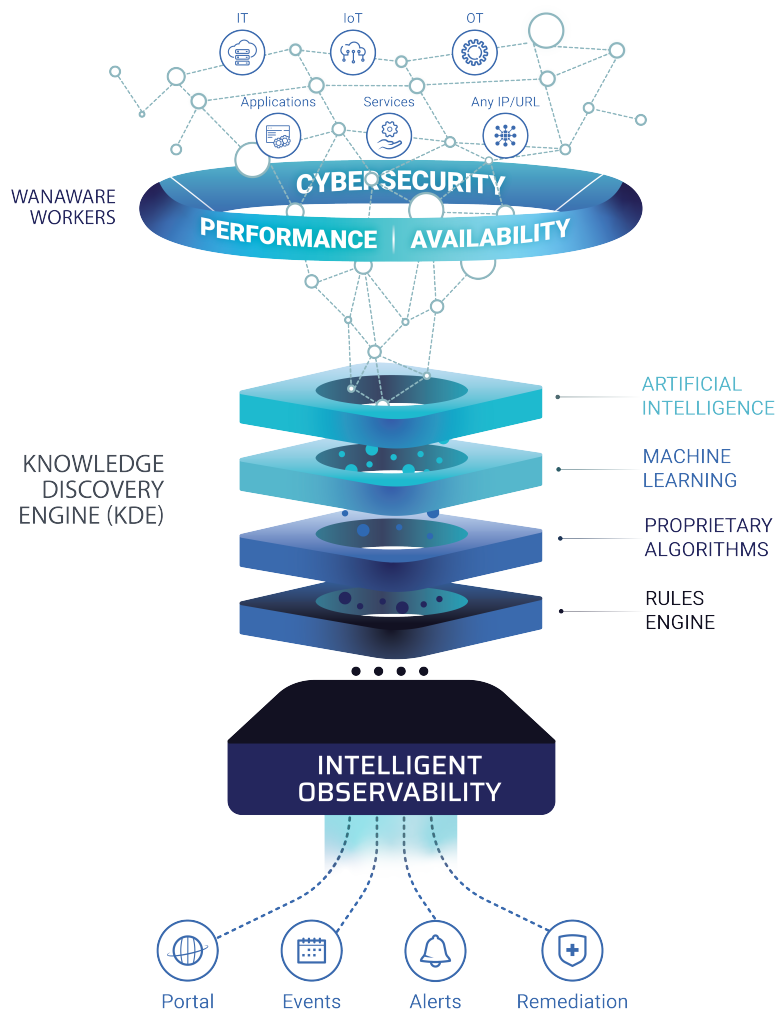

WanAware automatically catches anomalies, remediates them, and alerts you, whether that anomaly is inside the cloud, or outside of it. It's time to reduce risk and secure your connected assets, no matter where they are.

- Gain a comprehensive and clear understanding of all your assets, no matter where they are located
- Reduce risks to your entire ecosystem
- Identify and remove your unused assets
- No more blind spots

WanAware provides context, so you save time and resources.

See the risk as soon as it happens.
 Understand its potential effects.
 Allocate the right resources to solve it.

WanAware removes silos and bridges the gaps between teams, enhancing innovation, and reducing risk for your business. Your development team, devops team, and security teams should be working together, not apart from each other.

Know your Blast Radius.

WanAware provides you with a clear understanding of how your IT environment operates within the cloud and beyond. Increase your awareness and insight into all your dependencies and interdependencies to better assess the impact of threats on all your connected assets.

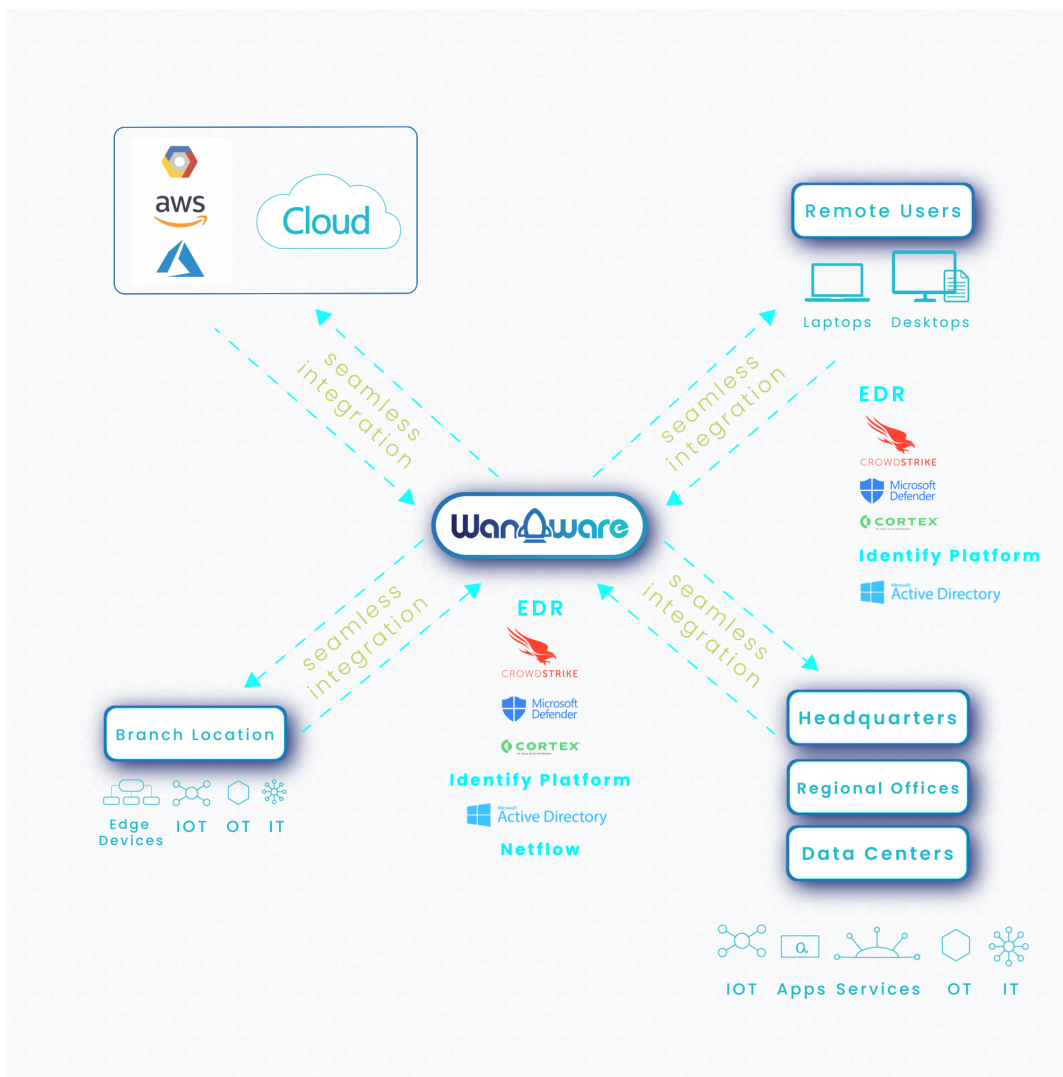

Quickly identify which threats require immediate action and which can be addressed later. From a single point of compromise, determine whether it will affect just one area or your entire organization, and understand its potential impact as soon as it occurs. Remediate the critical threats automatically.

Focus on the right problems to avoid wasting time and resources on less critical issues.

- Contextual Awareness
- Reduce False positives
- Understand dependencies and Interdependencies
- Minimize Erroneous Alerts
- Detect and Remediate

Seamless integration that's truly seamless

WanAware seamlessly integrates with any of your existing infrastructure. WanAware's platform can be deployed in minutes by non-specialists, allowing your specialists to focus on more complex problems.
