Following the review of PRC-006-NPCC-3 Automatic Underfrequency Load Shedding Regional Standard the next step in the approval process is to determine if it is necessary to implement the Cost-Effective Analysis Process (CEAP). Considering that the drafting team only clarified the requirement language within the standard and did not make any revisions that could potentially incur additional costs, I propose waiving the 2nd phase of the CEAP process on behalf of the PRC-006-NPCC-3 Automatic Underfrequency Load Shedding drafting team. Please let me know if this is acceptable to NPCC.

Regards,

John Babu
Chair – NPCC PRC-006-NPCC-3 Standard Drafting Team
