Babi Italia's Classic Convertible Crib offers a versatile sleeping solution for your little one, converting seamlessly from a crib to a toddler bed and daybed. The sturdy frame ensures stability, regardless of the conversion. A standard-sized crib mattress is required (sold separately), and while assembly isn't overly complex, having someone assist you can be helpful. To convert the crib to a daybed, remove one stationary rail and replace the bolts into empty holes on the headboard and footboard. The crib mattress should be placed at its highest level for newborns and lowest level for children who can pull themselves up on the rails. The recommended age range is 15 months, with a maximum weight capacity of 50 pounds. For assembly, start by inserting barrel nuts into the holes on the sides of the stabilizer bars, followed by lock washers and flat washers onto four Allen head bolts. Slide the bolts from outside through pre-drilled holes on the left side of the headboard and footboard, then repeat for the right side. Tighten each bolt using an Allen wrench. Next, open the support brackets on the mattress spring to form a "Y" shape. Choose one of three holes along the frame to set the mattress height, insert screws provided through the hole, and secure with wing nuts. Repeat this process for the remaining three brackets, ensuring the spring is level when finished. Finally, insert Allen head bolts through lock washers and slide them into pre-drilled holes on both ends of the right stationary rail. Position the rail so that its holes align with those on the headboard and footboard, then tighten the bolts using an Allen wrench. Repeat this process for the left rail. To complete assembly, screw crib feet tightly into the bottom holes on each leg while laying the crib on its side. With these steps, you'll have your Babi Italia Classic Convertible Crib assembled and ready for use. Lajobi, Inc. designs and manufactures children's furniture brands such as Babi Italia 1, including the Eastside collection. The Lifestyle Crib converts to a toddler bed and day bed, designed to be ageless with solid wood and veneer construction. To assemble the crib, follow these steps: - Screw the threaded feet into the headboard and footboard - Connect stabilizer bars by inserting barrel nuts - Open support brackets on mattress springs and secure with wing nuts Adjust height of mattress using screws with holes in side. Attach headboard to frame with 2 3/4 inch Allen bolts, and attach footboard from inside crib with 2 inch Allen head bolts. To convert crib to toddler bed, remove footboard and unscrew crib feet. Reattach feet, then insert guardrail using four 2 inch Allen head bolts. Follow manufacturer's guidelines for safety and maintenance.
