Adidas goalkeeper gloves size guide

Ideally, your goalkeeper gloves should fit slightly larger to accommodate about 1/4-1/2 inch (or 1cm) extension past your fingertips. Measure the circumference of your hand just below the knuckles, excluding your thumb. Round up the measurement to the next whole number and add 1 for your ideal glove size. For instance, if your measurement was 8.5", round up to 9 + 1 = Size 10 Glove. To determine which glove size is right for you, you can use our Goalkeeper Glove Size Guide, which includes a chart, measurements, and tips. A great fit of gloves is essential for maximum comfort and confidence as a goalkeeper. A well-fitting glove will also make it easier to handle the ball naturally. The goalkeeping glove size guide provides specific measurements based on age: 4-6 years, 6-7 years, 8-9 years, and so on. For optimum comfort and performance, goalkeepers need to select the right goalie glove size. To ensure your new goalkeeper gloves fit perfectly, measure the length of your gloves from the middle finger down to the end of your palm. When choosing your glove size, remember that a size up or down can always be exchanged if they are unused and in their original packaging. However, it is impossible to determine your perfect size until you try a pair since every keeper has a different preference when it comes to tightness or looseness. Your gloves should not be too tight or touching your fingertips, nor should you have too much excess space that makes them feel "floppy". A glove that is too small can tear/rip easily, while a glove that is too large will not instill confidence. Goalkeepers need to choose the right glove based on their preferences and style of play. The correlation between price and quality shows that more expensive gloves have latex padding, while cheaper ones use foam. Glove fingertips should be padded with spines for protection against injuries when handling a hard-kicked ball. Some keepers prefer flexible gloves for better finger movement, while others like stiffer gloves for greater control. A pair of gloves with plastic support straps can help prevent strains and sprains. The palm type also matters, with smooth palms providing an effortless grip but only lasting a short time, while dimpled palms offer a more durable hold. Closures come in various forms, including hook and loop, bandages, or V-notch systems, which provide better wrist support. Getting the fit right is crucial for comfort, confidence, and natural contact with the ball. Goalkeeper glove size should be measured starting at the middle finger and ending at the bottom of the palm, considering the thickness of the glove. The ideal length for game gloves is 1-1.5 inches longer than the fingers, avoiding gloves that are too tight or too loose. With proper care, goalkeeping gloves can last 12-14 games before needing to be converted into practice gloves. Choosing the right size goalkeeper gloves is crucial for their performance on the field. Some goalkeepers get more use out of their gloves than others, depending on how often they play. The design of these gloves gives them an advantage when punching the ball, especially during crosses when speed matters. To get a better grip on the ball, goalkeepers usually spit on their gloves, which helps prevent the ball from being deflected into the opposing team's path. When selecting goalkeeper gloves, it's essential to consider hand size, shape, position, and fit preference. Each brand has its unique sizing system, so it's vital to find a good fit with your chosen brand. To measure the right size, take the length of the middle finger from tip to palm end and round up for the best result. Goalkeeper glove sizing is not an exact science due to individual hand differences. A general rule is to wear gloves slightly larger than hand size, ensuring fingers don't touch the glove's tip but also avoiding excessive room that makes the glove feel loose. The optimal fit is usually around 1/4" to 1/2" over the end of your fingertip or a thumbnail length if you don't have a ruler handy. If trying on gloves in-store isn't possible, there are alternative methods for determining size. Measure the circumference of the palm's widest part, excluding the thumb, and round up to the next highest inch before adding 1" for glove size. It's also crucial to measure both hands and order the larger size if necessary. For youth goalkeepers, sizing can be more complex due to variations between manufacturers, models, and age ranges. Different brands offer unique size charts, with some sizes being much smaller or larger than others. For example, a youth size 7 might fit differently from an adult size 7. To simplify the process, there are general guidelines for glove sizes based on age, height, and hand measurements. Large goalkeepers require larger equipment, especially those with "meat hooks" for hands (big hands). To ensure the best fit, measure your chest circumference and compare it to the size chart provided. A good guide is what a keeper wears off the field; most goalkeeper apparel is sized for males unless specified as women's or narrow cut. For shorts and pants, measure your natural waistline and hip circumference. Goalkeeper equipment sizes vary between men's, women's, and youth sizes: * Men: Small (35-37"), Medium (38-40"), Large (41-43"), Extra Large (44-46"), 2X-Large (47-49") * Women: Small (30-32"), Medium (34-35"), Large (36-38"), X-Large (40-42") * Youth: Small (Youth Size 8), Medium (Youth Size 10), Large (Youth Size 14), X-Large (Youth Size 16) For goalkeeper gloves, measure from the base of your palm to the tip of your middle finger and around the part of your palm just below the knuckles. These elite level hybrids feature a rubber inject on the backhand with a latex wrap, providing excellent grip and minimizing errors when punching the ball. Contact keeperstop.com for any questions or concerns: 860-904-7679 or . Have your height, weight, age, and current apparel size ready to discuss goalkeeper glove sizing or review questions.
