Smarttech YOUR 24/7 SECURITY PARTNER

VISION^X

VISIONX AGENTIC SOC FOR MICROSOFT SECURITY

Modern threats move faster than traditional SOC workflows can respond

Attackers increasingly use AI to operate at machine speed, finding and exploiting gaps faster than traditional SOCs can respond. Most SOCs still investigate one alert at a time, by hand, across multiple tools.

121.99bn

▲ 25% year on year

Exploitation attempts observed globally in 2025.[1]

89%

▲ year on year

Increase in AI-enabled adversary operations.

Different timelines. Same business impact.

LEGACY SOC

Human-managed. Sequential. Slow.

0 hrs	1	**1. Alert** Alert generated and ingested.
~1 hr	2	**2. Queue** Alerts wait in queue for analyst availability.
		IMPACT HAPPENS HERE
1 hr	3	**3. Triage** Analyst reviews and prioritises.
2-6 hrs	4	**4. Investigate** Manual investigation, across multiple tools and tabs.
6-12 hrs	5	**5. Escalate** Handover to L2, then escalate and handover to L3.
12-24 hrs	6	**6. Contain** Manual response.

TOTAL TIME — Hours to days

AGENTIC SOC

AI-powered. Parallel. Proactive.

0 min	1	**1. Detect** AI agents continuously detect and correlate signals.
0 min	2	**2. Enrich** AI agents enrich context in parallel.
5 min	3	**3. Investigate** AI agents investigate autonomously.
8 min	4	**4. Decide** AI recommends action with a confidence score. HUMAN OVERSIGHT
<15 min	5	**5. Contain** Executes containment with human approval.

TOTAL TIME — *Under 15 minutes*

VISION^X

HUMAN-LED, AI-POWERED

Faster security operations still depend on human judgement

01

Triage is autonomous

AI agents ingest, enrich, classify and prioritise incidents, clearing repetitive work from the analyst queue.

02

Investigation is analyst-directed

The analyst picks the path; AI agents gather evidence, correlate it and build the timeline.

03

Remediation is analyst-approved

AI agents prepare the response; analysts approve every high-impact action before it executes.

VisionX Microsoft Defender Endpoint Risk Mock Up
