How to download youtube videos to desktop

Given article text here Download high-quality YouTube clipsIf you want to download just one part of a YouTube video in high-definition, there are several easy options available.Use online tools such as YouTube4k Downloader, Clideo, or ClipConverter to download and trim clips in HD format.Alternatively, install a video downloader application like 4K Video Downloader for faster downloads.However, be aware that downloading copyrighted content is illegal in most jurisdictions and violates YouTube's terms.1 Click on 4K Video Downloader.2 Paste link using + sign icon 3 Select download whole video option4 Choose desired format e.g. MP45 Set high def format - if available6 Pick download location - Desktop/Downloads folder etc7 Click Download8 Trim the selected part of the clipYou're about to share a clip from your YouTube video! Below it, you'll see how long the clip will be, and it'll loop in the video above so you can pick what part you want to share. Your HD clips can be anywhere from 5 to 60 seconds long. You'll also notice the timestamps for the start and end of your clip in the video.1 Choose the right moment. This is when you decide what part of the video you want to share.2 Name the clip. This will appear next to the social media share link, so make sure it's a good description!3 Click "Share Clip." It'll be clickable after you add the description.Using YouTube videos without permission from the copyright owner is illegal and not protected by fair use. However, it's legal to download certain types of videos, such as those you own, are public domain, or licensed under Creative Commons and Copyleft. You can also download videos using YouTube Premium, but these cannot be distributed.To download videos from YouTube using 4K Video Downloader or Open Video Downloader, follow these steps:Firstly, go to the official website of 4K Video Downloader (or its alternative Android version) and click the Download button next to your operating system. Make sure you're downloading it from a trusted source.If you choose the paid version, 4K Video Downloader Plus, be aware that it has extra features compared to the free version. The free version should suffice for most users.For Android users, you can sideload 4K Video Downloader by tapping the Download button below the "4K Video Downloader for Android" header and using the APK file.To start installing 4K Video Downloader (or Open Video Downloader), double-click the setup file on your Windows or Mac device. On Android, tap Open to begin the installation process.Next, go to YouTube's website in your preferred web browser and select the video you want to download. Copy the URL and paste it into 4K Video Downloader.In the 4K Video Downloader window, click or tap Paste Link to begin downloading the video. You can also change the format or resolution by using Smart Mode.Alternatively, you can use Open Video Downloader for Windows and macOS. This free tool is available at . To install on Windows, simply double-click the installer file and follow the prompts.Here's how to download YouTube videos using the Open Video Downloader app or MediaHuman for Windows or macOS:Once you have downloaded the Open Video Downloader .dmg file, double-click it and drag the app icon to the Applications folder to install. Alternatively, you can simply run the .exe file if you downloaded the standalone version.Copy the URL of the YouTube video you want to download and paste it into the address bar. To do this, right-click on the highlighted area or press Ctrl + click and select Copy. You can also find the "Copy" option in the Share menu below the video playback.Launch Open Video Downloader by searching for its icon in your Start menu or Applications folder. If you have downloaded the standalone version, double-click it to open.Open MediaHuman on your computer and paste the YouTube video URL into the app. You'll see a list of available resolutions; select the one that suits your needs.To download videos from YouTube, you'll first need to sideload NewPipe on your Android device because it's not available in the Google Play Store. This involves allowing your web browser to install apps from unknown sources through your device's settings: For Samsung Galaxy users, go to Settings > Apps and toggle on "Install unknown sources" for your web browser. Stock Android users can do this by going to Settings > Apps & notifications > Special access > Install unknown sources.Once you've done that, follow these steps to download NewPipe:1. Go to the NewPipe official page in a web browser.2. Tap the red download button for the latest version of NewPipe.3. After it's downloaded, tap "Open" and then "Install".With NewPipe installed, you can search and watch YouTube videos directly within the app. To download a video, follow these steps:1. Search for a video using the magnifying glass icon in the upper-right corner.2. Tap on the video to start playing it.3. Then, tap the arrow icon below the video playback to access download options.To select your desired video quality, tap the drop-down menu and choose the format and resolution you prefer. You can also opt for audio-only or include captions if needed. Finally, tap "OK" to initiate the download.If this method doesn't work due to YouTube's terms of service, consider these alternative methods:1. If you subscribe to YouTube Premium, saving videos to your device is straightforward: simply open YouTube on any device, click or tap on a video, and then select the Download icon.2. Alternatively, use VLC Media Player on your computer to download videos from YouTube by copying the video's URL and opening VLC Player, but be aware that this method may not work for all videos.Remember, always ensure you have permission to download videos according to their terms of service to avoid any potential issues.If you don't have it already, you can download VLC media player free of charge from videolan.org. VLC is an open-source video player with numerous benefits for playing all types of files. Firstly, to play content from your web browser in VLC, you must open a new network stream. The steps to do this are slightly different between Windows and macOS.For Windows users, follow these steps: Open Media, then click Open Network Stream. Click File, then Open Network. Next, paste the YouTube video's URL into the field, click "Please enter a network URL", and press Ctrl+V. Then, click Play to open the video in VLC.Alternatively, if you're unable to play any YouTube videos, try this workaround: Copy the provided code on this web page, paste it into a new Notepad or TextEdit file, save it to your desktop as youtube.lua, then delete an existing file called youtube.lua from the folder. Drag the new file into the folder and reopen VLC media player.Once you've opened the video in VLC, view its codec information by clicking Tools on Windows or Window on Mac, then selecting Codec Information. Copy the "Location" field at the bottom of the window, paste it into your web browser, and press Enter to play the video directly in the browser.To download the video, right-click the video, select Save Video As, then choose a location and click Save. The file will be downloaded as an MP4 file with the name "videoplayback".
