Aerochamber size guide

Using a spacer with your metered dose inhaler (MDI) can give you better control over your asthma symptoms. The AEROCHAMBER* device comes in different sizes for babies, children, and adults. For kids under 1 year old, the orange aerochamber is suitable, while the yellow one is best for most children from 1 to 10 years old. The blue aerochamber is designed for adults over 10 years old and has a mouthpiece instead of a mask. It's easier to use an aerochamber than puffing the inhaler directly into your child's mouth, but it's still better to use a large volume spacer if possible.
