Hp 1215 all in one manual

When purchasing a new device, such as the HP 1215, we often discard most of the documentation except for the warranty. Unfortunately, issues with the HP 1215 may arise only after the warranty period ends, and you might need to repair or perform routine maintenance on it. Moreover, it can be challenging to recall the functions and options available in the Printer HP 1215. Fortunately, all manuals for the Printer are available on our site through the links below. To install the optional double-sided printing module, follow these steps: Turn the rear access door handle a quarter turn counterclockwise and remove the door. Install the automatic dual-sided printing module (optional). Insert the module into the back of the printer. Connect the printer to your computer using either a USB cable or a bi-directional IEEE 1284-compliant parallel cable, which must be purchased separately. Make sure your computer's USB port is turned on and its parallel port is turned off for proper connection. Plug the power cord into the printer and ensure it is turned off. Remove the tape from each print cartridge and lift the print cartridge holder cover to insert a new one. Close the print cartridge holder cover and then the printer's top cover. Press the Power button, then open the printer's top cover. Remove the tape from each print cartridge, lift the print cartridge holder cover, and insert a new one. Close the print cartridge holder cover and then the printer's top cover. Do not touch the copper strip inside the printer. Install the printer software by following the instructions in the box or user manual. Once installed, load plain paper into the printer and press the OK/Yes button to begin printing a calibration page. Pour faire imprimer une feuille de calibration, suivez les instructions sur l'emballage. Si vous avez besoin d'aide technique, consultez le manuel du support HP. Pour commencer à imprimer une page de calibrage, appuyez sur le bouton OK/Si de votre imprimante.
