5-star63%4-star9%3-star3%2-star3%1-star22% Mick Wilson I was astonished by the speed of Bass Dragon's functionality. It's perfect for learning bass grooves as a beginner or overcoming writer's block, even for professionals who value diverse opinions. Since I work solo with AI, it's reassuring to have someone else's input. Worth every penny. Date of experience: December 05, 2024 Walter Sexton Honestly, I'm a huge fan of Unison's unison plugins. Bass Dragon has transformed the way I create baselines and melodies. It boasts an impressive library suitable for various genres, which is ideal for genre-benders like me who experiment with different sounds. I'd recommend it to any music creator looking to improve their beat or melody. Try combining melodies and beats to unlock its full potential. For example, pairing a country sample with a rap beat yields remarkable results. Date of experience: October 10, 2023 Thanks to the management for creating such an excellent plugin. I no longer need to hire a bassist. Wish they could develop a counter melody generator in different genres. Date of experience: October 20, 2024 Today, I attempted to purchase the \$7 pack but never received the file. Approximately 10-15 minutes later, I was charged \$67 for the "famous midi chord pack" I didn't buy. I've sent a mail and am waiting for a response regarding a refund. Date of experience: January 09, 2025 Cinco Sound I own all Unison plugins, and they're fantastic! Recently, I acquired a new MacBook and had to reinstall my plugins. However, my licenses weren't registering on my iLok. Vasil & Jake from customer support resolved the issue promptly. Keep up the great work at Unison - you guys rock! Date of experience: July 08, 2024 Cheryl Chavis I can honestly say that this is the best effects plugin I've purchased, and the learning curve wasn't too steep. Many plugins tend to be overly technical; however, Sound Doctor has it set up in a user-friendly manner, allowing for tweaking of frequencies, EQs, pitches, and sounds as desired. I'm thrilled about this new sound machine - highly recommend! Date of experience: June 15, 2024 Easy to use !! Awesome sounds built in as well as being able to use midi control sounds makes it even better . So many different combinations of bass lines - Being able to lock the key in with midi melodies and leads gives the ability to create almost a finished instrument quickly . I love it !! Date of experience: May 22, 2024 I had a painless experience downloading and installing Bass Dragon. I highly recommend this product - it's phenomenal for producers of any skill level. Date of experience: July 29, 2024 Prophiet Love all the products! Received an update about the new release immediately! Got almost all the plugins, and I produce music for 1017 BrickSquad Records, This plugin is a huge addition to my tool box - definitely a must-have. Date of experience: September 30, 2024 Stefan Marshall I appreciate Unison's generators; they've reignited my passion for making music. However, there are some minor bugs that I'd like them to fix. MIDI Wizzard and Bass Dragon have fewer bugs than others. Drum Monkey and other Unison plugins have improved significantly, but some bugs still exist. It's an enjoyable interface that makes users think about periodic updates for free midi packs or special offers. The sound quality is good. Unison has impressed musicians since 2020, with tools like Mangler and Bass Dragon being highly effective for making music. Mangler works well with various instruments, while the new Midi Wizard 2.0 interface is user-friendly and exciting to use. The AI Chord progression detection and Unison link feature are great additions that make creating music easier and faster. Some users love Unison Audio's products, but there's still room for improvement in terms of generating consistent beats. Looking forward to seeing everyone at the meeting tomorrow and discussing our strategies. I recently got Bass Dragon and it's got me all set for my bass sounds. I thought ya'll might not quite nail the afrobeat section but honestly, you did amazing work! The sounds are incredible and there are layers upon layers of awesome patterns to choose from - I'm having trouble deciding which one to use because they're all so great! I'd like to ask for a logdrum pattern - amapiano/afrobeat log drum patterns are really popular now and I think it would be awesome to have some banging rolling log drum patterns. One thing that took some getting used to is the random choices, but when you get the hang of it, it can be miraculous. A 5-star review from Anas Jibawi says this tool has taken his productions to a new level and brought musical ideas to life with ease and confidence. However, not everyone is happy - someone else feels they got scammed due to unauthorized charges. Another user suggests that Drum Monkey could benefit from an auto-find feature for easier mapping in DAWs, as well as some updates to the drum library names disappearing when reopening projects. Nigel Zhaware thinks it's a modern version of randomizer but wishes afrobeat sounds were more usable. But overall, people are loving the ease and inspiration that Unison plugins provide - even beginners can benefit! BIG RUBE says it's easy to use and install, while Stephane Pison calls it intuitive software with good results. I'm thrilled with my purchase! Initially, I was hesitant due to some negative reviews, but the promotion convinced me to give it a try. It's been a game-changer for my creative workflow and overall music-making experience. However, not everyone shares my enthusiasm. One user warns others not to waste their time or money on these products, stating they can stifle creativity and produce soulless music. On the other hand, several users rave about the Unison 808 Machine, praising its ease of use, high-quality sounds, and potential to revolutionize their music-making process. They highlight the software's fun graphics, intuitive interface, and ability to save time, which translates to more creative freedom and financial gain. Some users even praise the customer service, citing helpful live chat support and prompt resolution of technical issues. One user in particular stands out, proclaiming that Unison Plugins have given them an unfair advantage in the industry. They credit these tools with making their music-making process more diverse, complex, and enjoyable. Lastly, another user compares Unison's products to a dream kitchen for producers, emphasizing the vast array of sounds, plug-ins, and inspiration available within the software. I made a spontaneous purchase from my bank account due to my frustration with not being able to find quality bass in Drill music lately. It was well worth the investment. Unlike other software I have, this one offers a wide variety of 808s with consistent quality that's unmatched by others. Unison Audio is a professional and reliable website that goes above and beyond to ensure customer satisfaction. If you're honest and upfront about any issues or concerns, they'll work with you to resolve any problems. Here's hoping their capabilities exceed expectations in the future of music.
