Afterward, browse parts related to that specific model number to determine which cartridge is required for replacement. To find the model number, check the shipping container or box for fine print near the UPC code. If the packaging is lost, examine the supply line for a tag with the model number printed on it. Failing that, visit Delta's official website and manually match your faucet with their product range to obtain the correct model number. Using a screwdriver, unscrew the fastener located inside the assembly and pull the bottom housing of the knob out. Gently pry it off, then set it aside. Next, locate the actual cartridge and you will see a nut surrounding it. Use an Allen wrench to remove this nut and pull it out of the sink. Carefully grasp the top portion of the nut with the wrench and pull it out to reveal the cartridge. When it feels stiff, move it slightly from left to right while pulling it out. Once removed, you will see a small washer underneath. Make sure to keep this in place as you install the new cartridge. It is essential to select the correct replacement cartridge for your Delta faucet, as an incorrect one can lead to leakage issues. Inspect the old washer and replace it if damaged. Finally, carefully reinstall all parts in reverse order: put the cartridge nut back, place the bottom housing, screw in the fastener, and turn the knob. The key aspects of a Delta faucet include the handle shape, size, and style. Each model is uniquely designed by Delta, so it's essential to note these features. The type of finish, such as chrome or brushed metal, and the material used for the handle, whether clear plastic or metal, are also important details. To disassemble the faucet, remove the handle using an Allen wrench by unscrewing the set screw. Look underneath to find the cartridge. Check if there's a scald guard, a dial-shaped part with a notched knob. Match your unit online by browsing Delta's site and selecting features such as finish, type, parts, smart features, price, decorating style, and collection. To do this, start on Delta's home page, click on Bath, then select Bath Tub and Shower Faucets.
