Harveys water softener installation manual

Given article text here Installing a Block Salt Water Softener Requires adherence to plumbing regulations as stated by your local water supplier and following manufacturer guidelines. The recommended operating pressure ranges between 1.5-6 bar (20-90psi), but should not drop below 1 bar or exceed 8 bar. Installing a gauge on a nearby tap will provide the necessary readings. The system consists of four connections: inlet, outlet, drain, and overflow. It is essential to follow WRAS guidelines for proper installation. If your local water supply exceeds 6 bars, consider installing a pressure limiting valve. To set up your Block Salt Water Softener with WiFi, first download the myHarvey app and create an account using your email and password. Follow the provided steps or watch the video instruction, which includes: * Scanning the QR code located on the i-Lid label * Manually entering the DSN and SSN numbers found under the i-Lid * Activating the batteries by pulling out a red tab sticking out of the top of the i-Lid * Ensuring the salt lid is placed on a flat surface or directly on the softener To connect your water softener to WiFi, first download the myHarvey app and create an account using your email and password. If you already have a Harvey shop account, you can use those login details. The app is compatible with Apple iOS version 13 or later and Android OS version 6.0 or later, and can be set up on multiple devices. Once logged in, scan the QR code on the i-Lid label or manually enter the DSN and SSN number found underneath. Remove the red tab from the battery compartment to activate the batteries, then turn on the i-Lid by pressing the button once. Wait for the blue light to flash, indicating pairing with the myHarvey app. If the softener appears off, ensure the batteries are activated by removing the plastic tab. When prompted, press 'join', select your network, and enter your WiFi password to complete the connection. Your phone and i-Lid must be close to each other and within reach of the WiFi router. Connection is successful when you hear a beep and the blue light stops flashing. You can change your softener's name in the app settings, which Alexa will use if you have the skill enabled. Notifications and audio alerts are automatically turned on during setup, but can be adjusted later. For further assistance, refer to the myHarvey app FAQs or contact the Installations team via the Contact page. Before setting up your water softener, please note that you'll need to download the myHarvey app and create an account using your email and password. If you already have a Harvey shop account, you can use those login details. You can set up the app on multiple devices as long as they meet the required operating systems: Apple iOS 13 or later, Android OS 6.0 or later. To start setting up your softener, log in to the myHarvey app and follow these steps: 1. Scan the QR code located under the i-Lid's label or enter the DSN and SSN numbers manually. 2. Pull out the red tab from the top of the i-Lid to activate the batteries. This is necessary for an automatic sensor check to take place. Once you've completed step 1, make sure the salt lid is placed on a flat surface or on the softener itself when prompted by the app. Turn the i-Lid on by pressing and releasing the button once. Wait for the blue light to start flashing, indicating that your myHarvey app has connected with your water softener. If you're having trouble, ensure the batteries have been activated by removing the plastic tab in the battery compartment. When the app finds the i-Lid, press 'join' and select your network to enter your WiFi password for a successful connection. You'll know your app is successfully connected when you hear a beep and the blue light on the i-Lid stops flashing. Please note that you can customize the name of your water softener in the settings section of the myHarvey app at any time, and Alexa will use this name when using the Alexa skill. When setting up your water softener, you'll automatically receive notifications and audio alerts. For instructions on how to turn these off after setup, refer to our FAQs. To get started with your water softener, download the myHarvey app and create an account using your email and password. If you already have a Harvey shop account, you can use the same login details. You can set up the app on multiple devices, but it requires Apple iOS version 13 or later or Android OS version 6.0 or later. Once logged in to the myHarvey app, follow these easy steps (or watch our video below): Scan the QR code located on the label under the i-Lid, or manually enter the DSN and SSN numbers found on the underside of the i-Lid. You can also do this step with your installer unless you're setting it up yourself. Next, pull out the red tab from the battery compartment to activate the batteries. This is a critical step as an automatic sensor check will take place. Failure to do this may result in an unsuccessful pairing attempt. To ensure successful WiFi pairing, make sure the salt lid is placed on a flat surface or on the softener itself when prompted by the myHarvey app. Then, turn on the i-Lid by pressing and releasing the button once, and wait for the blue light to start flashing. This will pair your myHarvey app with your water softener. If you encounter any issues during setup, please refer to our FAQs or contact our Installations team for further assistance. To get started with your water softener, first download and set up the myHarvey app. You'll need an account, which you can create using your email and password. If you already have a Harvey shop account, you can use those login details. The app is compatible with Apple iOS 13 or later and Android OS 6.0 or later. Once logged in, follow these steps: Scan the QR code on the i-Lid or enter the DSN and SSN numbers manually. Make sure the red tab on the battery compartment is pulled out to activate the batteries. This will trigger an automatic sensor check. Next, place the salt lid on a flat surface or attach it to the softener. Turn on the i-Lid by pressing and releasing the button once. Wait for the blue light to start flashing, which indicates that your myHarvey app is pairing with your water softener. Ensure that the batteries are activated by removing the plastic tab in the battery compartment if the softener appears to be off. Once paired, select your network and enter your WiFi password to complete the connection. Keep in mind that your phone and i-Lid need to be close together and within reach of the WiFi router for a successful connection. You'll know it's connected when you hear a beep and the blue light stops flashing. You can change the name of your softener in the app settings at any time. Notifications and audio alerts will automatically be turned on during setup. For more information on turning these off, see the "How do I turn on or change myHarvey app notifications?" page. If you need further assistance, refer to the FAQs or contact our Installations team for help.
