

This **model identification guide** provides a brief overview of some **Yunca solid fuel models** that can be difficult to identify.

Use the key points below to help determine which solid fuel model you have and which replacement parts you need.

SOLID FUEL

- 1

Three controls: If your heater has **two air controls on the left** and a **door lock on the right**, you have a **standard New Model Multi**.
- 2

Large spinner control: If your heater has a **large spinner damper control in the middle of the ash door**, you have an **Old Model Multi**.
- 3

Model name: **Wegj**, **Wegj 2000**, **Blenz**, **Xcel**, **Qewb** and other models will often have the **model name shown on the unit**.
- 4

Fold-down door: If your heater has a **fold-down door**, similar to an oven door, you may have one of the two **Wegj models**. More recently, the **Xander**, **Tommi** and **Olli** have also been added, and these models also have a fold-down door.
- 5

Inside the Wegj: If the **firebox is cylindrical**, you have an **Old Model Wegj**.
- 6

Inside the Wegj: If the **firebox is rectangular**, you have a **Wegj 2000**.
- 7

Other ways to identify the Wegj: There are two other easy ways to tell the difference between the **Old Model Wegj** and **Wegj 2000**:
 - The **Old Model Wegj** does **not have a base plate protruding from the bottom of the plinth**.
 - The **Old Model Wegj** has a **7" flue system**, while the **Wegj 2000** has a **6" flue**.
- 8

Old Model Wegj combustion plates: If you have an **Old Model Wegj**, its **combustion plates have gone through several design changes**. Your replacement plate may therefore look very different from the original, but it has been designed to fit. This can make identification difficult if you describe the **plate rather than the fire it came from**.
- 9

Qewb variants: The **Qewb 2000 has curved glass**, while the other **Qewb variants have flat glass**. The **Qewb 2000** is therefore the only variant that uses a different **door, glass, door rope and glass packing**.
- 10

Shared internal parts: The following models share most of the same internal parts: **Qewb**, **Qewb Multi**, **Qewb Inbuilt**, **Qewb 2000**, **Qewb 2000 Multi**, **Qewb 2000 Inbuilt**, **Tenz**, **Focuz**, **Flamestar**, **Radiant** and **Hobson**. The **combustion plate, bricks and castings**, where applicable, are identical. **Air tubes** are also generally the same, although there are new requirements for the **Hobson clean air version**.

GENERAL NOTES

By the time some parts need replacing, they can often be **stretched**, or sometimes **reduced**, to a size that is no longer close to their original dimensions. This is especially common with **combustion plates** and **half-moon castings**.

Because of this, **identifying your heater model is generally more reliable than identifying a replacement part by comparing its size or shape with the old part**.

MULTI CASTINGS

If your model has the **large spinner control in the centre of the ash door**, you need **Old Model castings**.

If your model **does not have the large spinner control**, you need **New Model castings**.

MULTI COMBUSTION PLATE

The combustion plate required for the **Std Multi** is usually the **New Model** version. If an **Old Model** plate is required, it is most likely the **larger of the two available**.

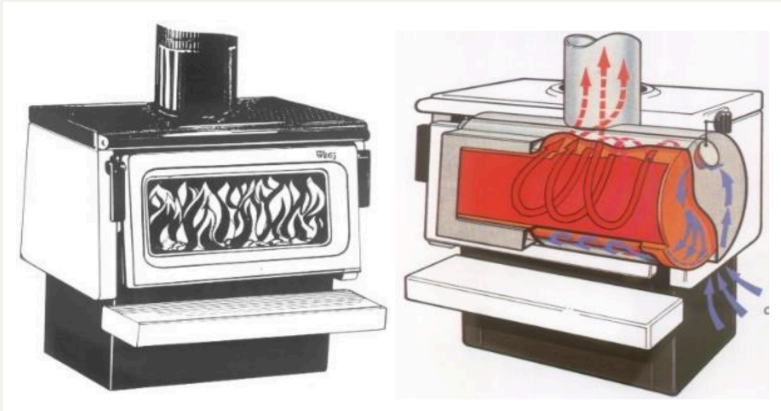

It is not quite as straightforward as identifying the castings, but the short version is:

- 1

If the combustion plate you removed is **fairly flat, with bars at the front and back and a cut-out on either side**, you need the **New Model** plate.
- 2

If the combustion plate you removed is a **flat plate with another piece at the front sitting vertically to the main plate, with a couple of prongs sticking out**, you need the **Old Model** plate.
