

# Explorer Eclipse

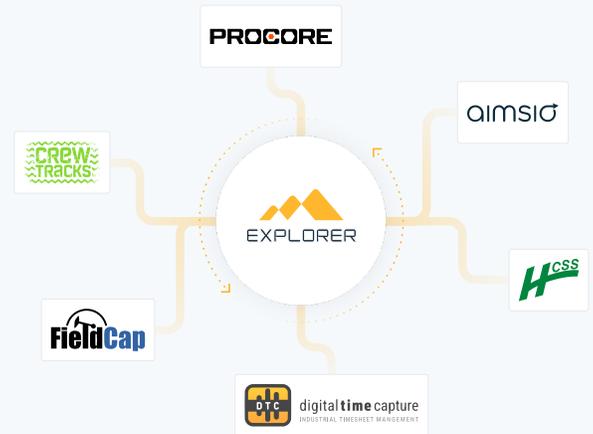

Construction ERP Software

## Feature Overview: Eclipse Uplink

Powerful API Integrations &  
Advanced Data Automation

# Maximize Eclipse with Powerful Integrations & Data Control

## Overview

We understand that no two businesses operate the same way. Eclipse Uplink offers the flexible integration options you need, including robust API connections and fast drag-and-drop data uploads.

Connect the essential tools you already use without the hassle of double data entry, ensuring your systems stay seamlessly integrated, accurate, and up to date.

## Why Eclipse Uplink

### Strengthens Your Workflow

- ✓ Flexible integration with third-party products using APIs built on open technology standards.
- ✓ Eliminate double entry – validate and transmit data between systems with ease.
- ✓ Custom API documentation for key data integration points to ensure smooth implementation.
- ✓ Technical services available to assist in the integration process with third-party products.
- ✓ Freedom to choose the best solutions for your business while maintaining full integration with Eclipse.

As a PM, I use a combination of HeavyJob and Eclipse. I use Eclipse for all invoicing approvals and progress draw entries. All our labour and equipment costs from HeavyJob are pulled into Eclipse, so it makes it really easy to see what our overall job costs vs revenue are.

**NEW !**

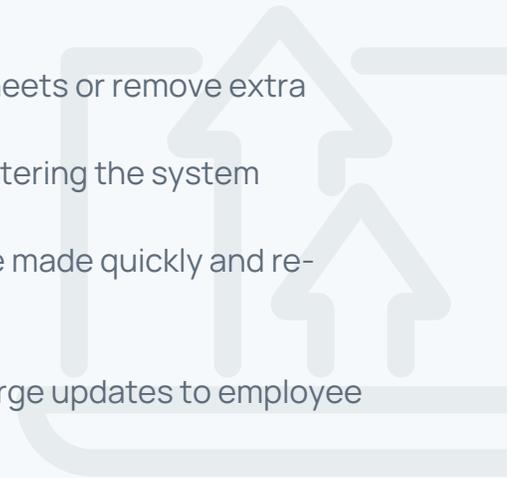

## **Enhanced Bulk Upload & Smart Error Handling**

Uplink now delivers even greater control and reliability when uploading large volumes of data into Eclipse.

Upload thousands of master file records without timeouts, while built-in validation ensures only clean data updates your system.

- Process large data uploads seamlessly with no timeouts
- Automatically recognize required fields – no need to trim spreadsheets or remove extra columns
- Validate records before updating to prevent incorrect data from entering the system
- Download a new Excel file containing only failed records
- Each failed record includes clear error details so corrections can be made quickly and re-uploaded

This enhancement dramatically improves efficiency when managing large updates to employee records, master files, and other high-volume data sets.

## **How Uplink Works**

Eclipse Uplink enables secure data exchange between Eclipse and the systems your organization relies on.

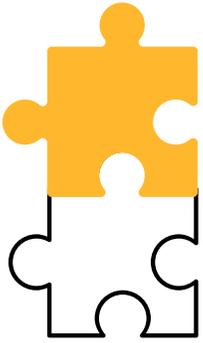

To take advantage of Eclipse's API integration capabilities, organizations activate Uplink, our powerful integration framework that enables seamless data exchange between platforms.

Each Uplink purchase includes two hours of technical consulting with our expert team to guide you through the integration process.

**Key integration points include, but are not limited to:**

- AP Invoices
- Cost Codes
- Equipment Hours
- General Ledger Transactions
- Inventory Transactions
- Job Budgets
- Jobs
- Payroll Time
- Purchase Order Receipts
- And more

## Unlock Powerful Analytics and Real-Time Data with **Eclipse Integrator**

Eclipse Integrator is a game-changing tool that transforms how you manage and analyze data across your organization. By connecting Eclipse with API-documented third-party systems, Integrator allows you to pull data from external applications into Eclipse, creating real-time insights, custom dashboards, and actionable reports, all without the need for expensive custom development.
