Construction ERP Software

KoreLogix

One Source. Every Number. Built for Scale. Define Your Metrics Once. Trust Them Everywhere.

Overview

As your reporting environment grows, so does complexity. More jobs. More transactions. More teams building their own reports – each potentially calculating the same metric a different way.

KoreLogix is the centralized analytics layer that sits on top of your Explorer data and standardizes how metrics are defined. Pre-joined fields, pre-calculated values, and structured transactional data are stored and ready – so when your team runs a report, the heavy lifting is already done.

The result: lightning-fast analytics across millions of records, with numbers your whole organization can rely on.

Why Add KoreLogix?

-  **Define Formulas Once, Use Them Everywhere**
Build calculated elements once inside KoreLogix and make them available across every report. Your key figures stay consistent, no matter who's building the analytic.
-  **Run Millions of Records in Seconds**
KoreLogix pre-loads data from your master files so reports that once struggled at scale now run in a fraction of the time – delivering the responsive experience your team expects, regardless of data volume.
-  **Eliminate Runtime Complexity**
Instead of joining the customer, job, and cost code masters on the fly, KoreLogix pre-joins and stores everything in a single structured analytic – giving your team access to thousands of ready-to-use elements without the wait.
-  **Built for Power Users and Growing Organizations**
Ideal for construction companies running large volumes of Job Cost and General Ledger transactions, custom dashboards, and multi-layered financial analysis.

How It Works

KoreLogix stores transactional data in a pre-joined, pre-calculated structure so nothing is built at runtime. Data refreshes on a schedule you control – typically at off-peak intervals – and new calculated elements are vetted and deployed by Explorer, making them available to all KoreLogix customers as the platform grows.

- ✔ Single unified analytic for Job Cost and General Ledger Transactions
- ✔ Pre-joined master file data – customer, job, cost code, and more.
- ✔ Thousands of ready-to-use elements with hover descriptions
- ✔ Custom views built with Eclipse's field chooser
- ✔ Scheduled and incremental data refresh options
- ✔ Expandable – new data sets and elements added continuously

Ready to See KoreLogix in Action?

For organizations running high volumes of transactional data, KoreLogix delivers the speed, structure, and consistency your analytics have been waiting for. Contact your Explorer sales representative to learn more.
